THIS VOLUME : 

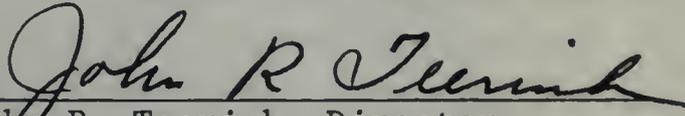

FOREWORD

The hydrologic data programs of the Department of Water Resources supplement the data collection activities of other agencies and help satisfy the needs for data on the quality and quantity of water in the State. Bulletin No. 130-73 presents accurate, comprehensive, and timely hydrologic data which provide a more complete knowledge of the factors affecting our environment and are prerequisites for effective planning, design, construction, and operation of water facilities.

The Bulletin No. 130 series is published annually in five volumes. Each volume presents hydrologic data for one of five reporting areas of the State. These areas are delineated on the map on the opposite page.

Volume II contains data on climate, surface water flow, change of ground water levels, and surface and ground water quality in Northeastern California for the 1972-73 water year. Figures show the location of climatological observation stations and ground water basins; the fluctuation of average ground water level in wells; the location of surface water measurement and surface water quality stations; and hydrographic unit boundaries.

John R. Teerink, Director
Department of Water Resources

ACKNOWLEDGMENTS

Department data collection activities have been aided by various public and private agencies and by many private citizens. This cooperation is gratefully acknowledged. Special mention is made of the following agencies which have made substantial contributions.

Arcade Water District
Butte County
California Water Service Company
City of Sacramento
City of Stockton

Colusa County
East Bay Municipal Utility District
Glenn County
Lake County
National Weather Service

Pacific Gas and Electric Company
Placer County
Sacramento County
Sacramento Municipal Utility District
San Joaquin County

Solano County
South San Joaquin Irrigation District
South Sutter Water District
Stockton-East Water District
Sutter County

Tehama County
U. S. Army, Corps of Engineers
U. S. Bureau of Reclamation
U. S. Forest Service
U. S. Geological Survey

Yolo County
Yuba County

INTRODUCTION

This bulletin contains data regarding climate, surface water, ground water levels, and surface and ground water quality. The data were collected by the Department of Water Resources and by various organizations cooperating with the Department.

The Department's files contain some data that currently are not being published. Inquiries regarding local data should be directed to the District Offices listed as follows:

Central District
P. O. Box 9137
3251 S Street
Sacramento, CA 95816

San Joaquin District
P. O. Box 2385
3374 East Shields Avenue
Fresno, CA 93723

Northern District
P. O. Box 607
2440 Main Street
Red Bluff, CA 96080

Southern District
P. O. Box 6598
849 South Broadway
Los Angeles, CA 90055

Inquiries regarding statewide data should be directed to the Division Office:

Division of Resources Development
P. O. Box 388
1416 Ninth Street
Sacramento, CA 95802

Federal and local agencies also are maintaining substantial data files. A partial listing follows:

Federal Agencies

Appendix A

CLIMATOLOGICAL DATA

This appendix contains precipitation data for certain climate stations and storage gages for the 1973 water year, October 1, 1972, through September 30, 1973. Additional precipitation data, as well as data concerning air temperature, wind, and evaporation, are available in the National Weather Service's publications "Climatological Data - California"; "Hourly Precipitation Data - California"; and, for particular key stations, "Local Climate Data". These publications can be obtained from:

Superintendent of Documents
Government Printing Office
Washington, D. C. 20402

Other agencies within the area covered by this report have established their own supplemental rain gage networks. Some of these agencies are: California Department of Parks and Recreation; East Bay Municipal Utility District; Pacific Gas and Electric Company; Sacramento County; Sacramento Municipal Utility District; Tehama County Flood Control and Water Conservation District.

Each station in this appendix has been assigned an identification number. The letter and first digit denote the hydrographic unit as shown below. The remaining digits denote the alphabetical sequence of the station. A complete list of stations is contained in Bulletin No. 165, Index of Climatological Stations in California, 1971.

TABLE A-1

PRECIPITATION IN NORTHEASTERN CALIFORNIA
DURING WATER YEAR 1973

This table summarizes monthly precipitation totals for selected stations for the 1973 water year, October 1, 1972, through September 30, 1973. The table shows each station's assigned number in accordance with the explanation given in the introduction to this appendix. Location is shown by latitude and longitude in degrees to the third decimal.

Precipitation values are shown to the nearest hundredth (.01) of an inch. Where digital recording rain gages that record to only the nearest tenth (.1) of an inch are used, a zero is shown in the second decimal place. The following notations are used to qualify the values:

- .00- No record or incomplete record
- B Record began
- E Wholly or partially estimated
- N Record ends
- .00T Trace, an amount too small to measure

The county code for each station is shown below:

Alameda	60	Marin	21	San Mateo	41
Alpine	02	Mariposa	22	Santa Barbara	42
Amador	03	Mendocino	23	Santa Clara	43
Butte	04	Merced	24	Santa Cruz	44
Calaveras	05	Modoc	25	Shasta	45
Colusa	06	Mono	26	Sierra	46
Contra Costa	07	Monterey	27	Siskiyou	47
Del Norte	08	Napa	28	Solano	48
El Dorado	09	Nevada	29	Sonoma	49
Fresno	10	Orange	30	Stanislaus	50
Glenn	11	Placer	31	Sutter	51
Humboldt	12	Plumas	32	Tehama	52

				Arizona	63
				Mexico	64

TABLE A-2

INDEX OF STORAGE GAGE PRECIPITATION STATIONS

This table lists and shows location and other information for the storage gages for which the seasonal accumulation of precipitation is reported in the following table. These gages are located in the remote mountain regions where no observers are available to operate conventional rain gages. Storage precipitation gages are tanks with capacity for storing an entire year's rainfall along with antifreeze to melt frozen precipitation and oil to prevent evaporation losses. Once each year, in the summer or early fall, the precipitation that has accumulated since the last measurement is measured and then emptied out. With the addition of the proper amount of oil and anti-freeze, the gage is ready to receive the next season's amount. Although logistics preclude conducting the measurement operation exactly at the end of the water year and exactly one year following the previous measurement, the gages fairly accurately depict the total precipitation for the water year because usually a very small amount of precipitation occurs in the summer months.

An explanation of the column headings and the code symbols used in connection with the storage gage station listing follows:

Station Number - Each station in these tables has been assigned an identification number as explained in the Introduction to this appendix.

40-Acre Tract - This denotes the location of the station within a section subdivision of the U. S. Public Land Survey. The letter code is derived from the section diagram to the right.

D	C	B	A
E	F	G	H
M	L	K	J
N	P	Q	R

Base and Meridian - The code for this column is as follows:

M - Mount Diablo Base and Meridian

Cooperator Number - This number is assigned from the following list:

- 000 Private Cooperators
- 419 Tehama County Flood Control and Water Conservation District
- 814 California Department of Water Resources, Snow Surveys
- 900 National Weather Service
- 903 U. S. Corps of Engineers
- 905 U. S. Forest Service
- 911 Military Weather Stations in California

County - This is a standard code for California counties and is explained in the Introduction to Table A-1.

APPENDIX B

SURFACE WATER MEASUREMENTS

This appendix contains surface water data for the 1973 water year, which is from October 1, 1972, to September 30, 1973. The data consists of unimpaired runoff; daily mean discharges; daily mean gage heights, maximum and minimum gage heights; elevations of daily tides; gaging station locations; diversion quantities; water imported to the report area; water exported from the report area; summary of water supply and utilization for the Sacramento-San Joaquin Delta; streamflow measurements at miscellaneous locations; corrections and revisions to previously published reports; and contents and inflow for major reservoirs.

Each station in this appendix has been assigned an identification number. The first two digits denote the hydrographic unit as shown below. The remaining digits further identify the station.

<u>Sacramento River Basin</u>	<u>San Joaquin River Basin</u>	<u>North Lahontan Area</u>
A0 Sacramento Valley Floor	B0 San Joaquin Valley Floor	G1 Surprise Valley
A1 Pit River	B1 Cosumnes River	G2 Madeline Plains
A2 Shasta Lake	B2 Mokelumne-Calaveras Rivers	G3 Eagle Lake
A3 Sacramento Valley Westside	B8 San Joaquin Valley Westside	G4 Susan River
A4 Sacramento Valley Northeast	B9 Sacramento- San Joaquin Delta	G5 Smoke River
A5 Feather River		G6 Herlong
A6 Yuba-Bear Rivers		G7 Truckee River
A7 American River	<u>San Francisco Bay Area</u>	G8 Carson River
A8 Cache Creek		G9 Walker River
A9 Putah Creek	E0 San Francisco Bay	

In addition to data collected and published by the Department of Water Resources in this appendix, the U. S. Geological Survey collects and publishes data on many additional gaging stations for the same report area. This work is done under a federal-state cooperative contract or through cooperative arrangements with other local or governmental agencies. The data published in the following reports together with this report present a comprehensive analysis of water resources for the area:

1. "Water Resources Data for California, Part 1: Surface Water Records, Volume 2: Northern Great Basin and Central Valley". U. S. Department of the Interior, Geological Survey.

2. "Annual Report of Operations, Central Valley Operations Office, Water and Power Control Division". U. S. Department of the Interior, Bureau of Reclamation.

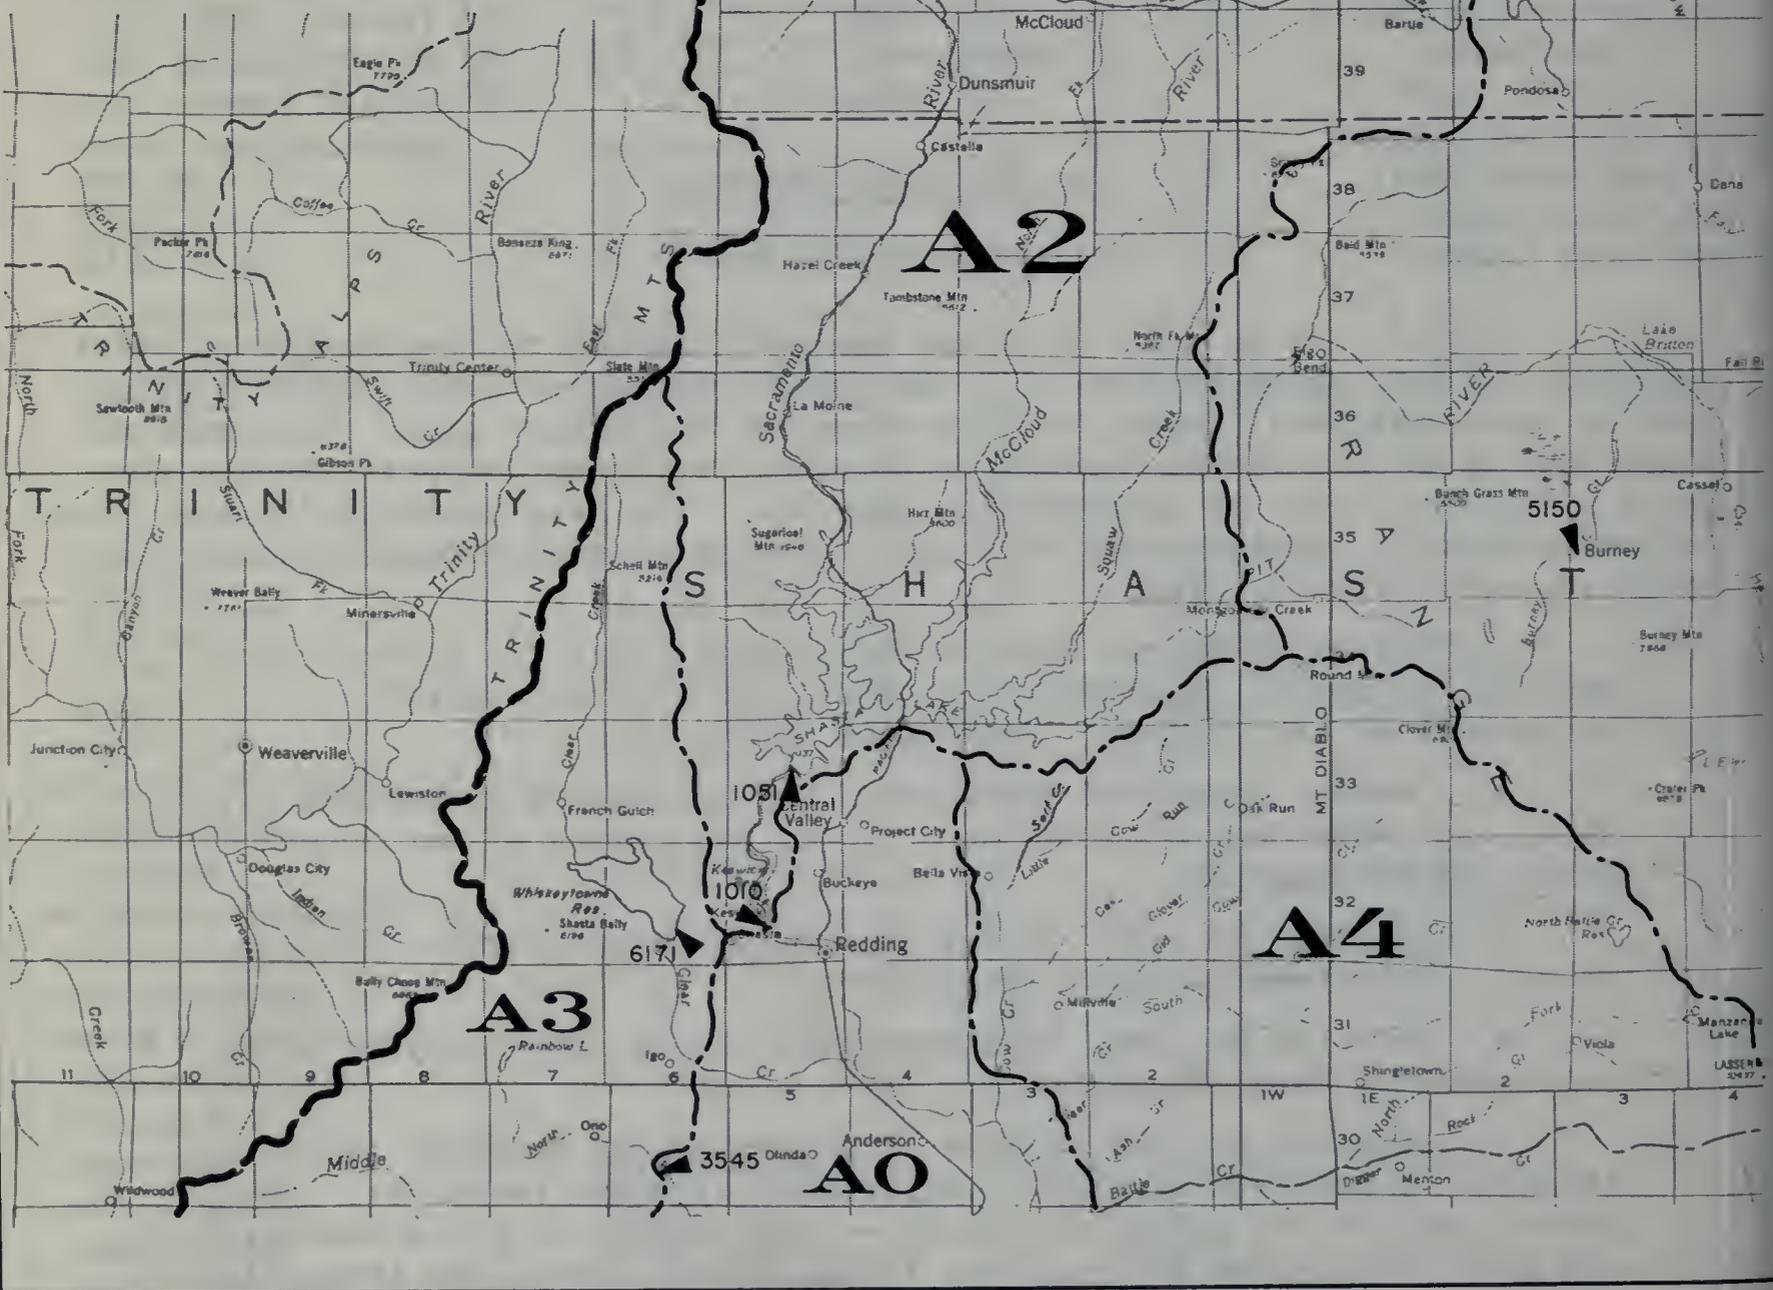

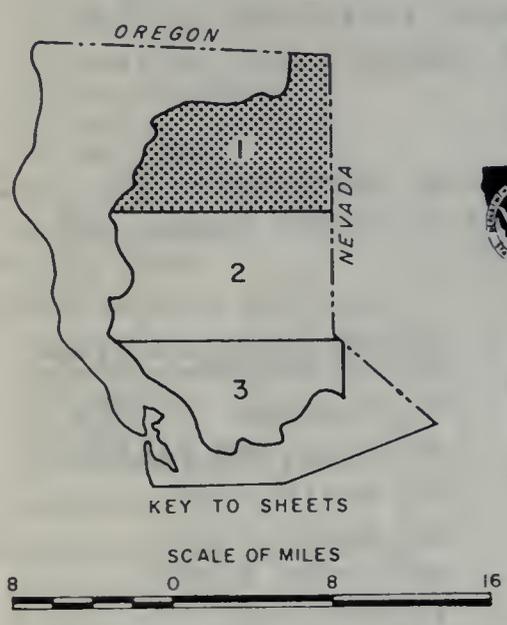

3. Bulletin No. 120, "Water Conditions in California, Fall Issue". Department of Water Resources.

4. Bulletin No. 132, "The California State Water Project". Department of Water Resources.

5. Bulletin No. 157, "Index of Stream Gaging Stations in and Adjacent to California, 1970". Department of Water Resources. This index contains the period of record -- with number of years missing -- and more information for stations in the report area. The index also identifies the agency from which a particular record may be obtained.

TABLES B-1 AND B-2

UNIMPAIRED RUNOFF

Unimpaired runoff is defined as the flow that occurs naturally at a point in a stream if there are: (1) no upstream controls such as dams or reservoirs; (2) no diversions or unnatural accretions; and (3) no change in ground water storage resulting from development. The computed natural or unimpaired runoff values are considered to be the flows that would occur if no impairments were upstream from the measurement point.

The percent values are preliminary, subject to revision.

Average unimpaired runoff in thousands of acre-feet computed from the 50-year period October 1920 through September 1970.

(a) Figures were computed from summations of unimpaired runoff at foothill stations on major tributaries only and do not include runoff from minor tributaries and from the valley floor.

TABLE B-3

SUMMARY OF WATER SUPPLY AND UTILIZATION
SACRAMENTO-SAN JOAQUIN DELTA

This table presents in thousands of acre-feet the correlation of water supply and use for the Sacramento-San Joaquin Delta Service Area.

The Delta Service Area is a natural hydrographic subdivision which is comprised of two subareas. One is the Delta Lowlands which are those lands within a boundary located approximately at the 5-foot contour; the Delta Uplands are those lands outside the Delta Lowlands boundary which are served by water from the lowland channels.

The water supply available to the Delta Service Area is the sum of the measured inflow and the precipitation. The measured inflow is determined from 14 gaging stations listed in the table. The precipitation is determined by the Thiessen Balance Method for stations located at Davis, Galt, Rio Vista, Lodi, Brentwood, Stockton, and Tracy S. P. "Water Utilization" in the same table includes agricultural use, evaporation, exports through the California Aqueduct, Delta-Mendota and Contra Costa Canals, and diversion for the City of Vallejo. Agricultural use in the uplands is the average measured diversions for the 10-year period October 1960 through September 1970. Agricultural use in the lowlands is computed by unit values of consumptive use of the various crops, multiplied by the acreages. Unit values of consumptive use were derived from experimental work by the University of California and California Extension Service as reported in Bulletin No. 27, "Variations and Control of Salinity in Sacramento-San Joaquin Delta and Upper San Francisco Bays". Crop acreage values used in this table were determined from a survey made in 1960 and 1961.

			1-16-73	46,160
			1-16-73	45,900
			1-16-73	47,420
			1-16-73	48,520
San Joaquin River above Old River	37°48'27"	121°19'28"	10- 5-72	2,923 (c)

a The flows shown are mean cyclic flow for a tidal phase which approximates 24 hours and 50 minutes in time.

b The mean cyclic flow is toward the downstream direction of the channel.

c The flows shown are mean flows for a period of 8 hours from 0700 to 1500.

TABLE B-5
DAILY MEAN DISCHARGE

The streamflow table for each stream or stream system is arranged in downstream order. Stations on a tributary entering between two main stem stations are listed between those stations, and in downstream order on that tributary. A stream gaging station is named after the stream and the nearest post office (Feather River at Yuba City) or well-known landmark (San Joaquin River at Brandt Bridge).

The discharge estimated for periods of no record or invalid record are shown with the letter "E". Also qualified by the letter "E" are discharges obtained from extended ratings which exceed 140 percent of the highest measured flow-rate on which the rating curve was based.

The discharge figures in this table have been rounded off as follows:

Daily Flows - Second-Feet

0.0	- 9.9	nearest	Tenth
10	- 999	"	Unit
1,000	- 9,999	"	Ten
10,000	- 99,999	"	Hundred
100,000	- 999,999	"	Thousand

Monthly Means - Second-Feet

0.0	- 99.9	nearest	Tenth
100	- 9,999	"	Unit
10,000	- 99,999	"	Ten
100,000	- 999,999	"	Hundred

Yearly Totals - Acre-Feet

0.0	- 9,999	nearest	Unit
10,000	- 99,999	"	Ten
100,000	- 999,999	"	Hundred
1,000,000	- 9,999,999	"	Thousand

The streamflow data received from cooperating agencies do not necessarily adhere to the above criteria.

Daily flow data computed by machines is rounded as listed above. Monthly means, monthly acre-feet, and yearly totals are not rounded in these cases.

Station located 250 ft. above Vina-Corning Highway bridge, 2.6 mi. SW of Vina. The maximum discharge of record is for the main river channel and does not include water by-passing the station on the left bank. Flow regulated by Shasta Lake since December 30, 1943. Approximately 190,000 acre-feet diverted from the river between Keswick and Vina in addition to diversions from the tributaries. Trans-basin diversions from the Trinity River to Whiskeytown Reservoir via Judge Francis Carr Powerplant began in April 1963. Drainage area, excluding Goose Lake Basin, is approximately 10,930 sq. mi.

Station located 4.0 mi. E of Colusa, 3.7 mi. N of Meridian. Tributary to Sacramento River. Flow regulated by gravity culverts. During the summer months these flows, together with the flow of Butte Slough near Meridian and Wadsworth Canal near Sutter are made up almost entirely of return water from lands irrigated by Feather River diversions.

B - Irrigation season only.

							OCT 37-DATE				

Station located on right bank 0.5 mi. upstream from Farmland Road 1.7 mi. NE of Meridian. Tributary to Sutter Bypass. Flow affected by gate operation. Flow during summer months is made up almost entirely of return water from lands irrigated by Feather River diversions. During flood periods. Sacramento River water enters Butte Basin above Butte City from bank spill and spill over Moulton and Colusa Weirs.

- Flood season only.

Station located at South Butte Road Bridge, 0.9 mi. E of Sutter. Tributary to Sutter Bypass. This station and one 2.2 mi. downstream are used to determine the slope for rating of canal. This flow and flow of Butte Slough to Sutter Bypass make up entire Feather River contribution to the Sutter Bypass. Records for January 1939 to March 1961 previously published as Wadsworth Canal at Butte House Road.

Station located 0.5 mi. above mouth, 4.6 mi. SE of Knights Landing. During low flows this represents combined flows of Sutter Bypass and Reclamation District 1500. During high flows (above gage ht. 26.0 ±) the slough is entirely submerged as it lies within the bypass area. Sharp rises in the Sacramento River cause zero or negative flow.

B - Irrigation season only.
 F - Flooded

Station located 1,000 feet above I Street Bridge, 0.5 mile below the American River. Below approximately 30,000 cfs, the stage-discharge relationship is affected by tidal influence. Maximum discharge listed at site and datum then in use. Records furnished by U. S. Geological Survey. Drainage area is 23,530 square miles.

- Irrigation season only.

Station located at low water bridge, 0.8 mile below U. S. Highway 40 Bridge, 2.3 miles southwest of Davis. Tributary to Yolo Bypass. Treatment plant at the University of California at Davis discharges into the channel 100 feet upstream from gage. There is little or no flow 1,000 feet upstream from station during periods of heavy upstream diversion. Flows past the station are not computed during these periods.

Station located just above the Sacramento-Woodland Railroad Bridge, 6 miles above the Sacramento Bypass, 7 miles below Fremont Weir, 7 miles east of Woodland. Supplementary water stage recorder, located 7 miles downstream, used for computations during periods of low flow. Stage-discharge relationship at supplementary recorder location at times affected by tidal action. Records furnished by U. S. Geological Survey.

Ø - Irrigation season only.
 # - Flood season only.

Station located at Airport Way Bridge, 1.5 miles east of French Camp. During periods when backwater from a temporary diversion dam affects the stage-discharge relationship, a supplementary water stage recorder, located 0.5 mile downstream on the bypass, is used for computations. Tributary to San Joaquin River. Maximum discharge listed at site and datum then in use.

Station located 35 feet below B Street Bridge, immediately south of Stockton. Prior to November 10, 1965, station located at Laurel Avenue, 0.2 mile upstream from present location. Tributary to San Joaquin River via French Camp Slough. During high flow, water from Duck Creek enters Mormon Slough approximately 2 miles east of the head of Stockton Diverting Canal. Discharge listed does not include this overflow. Flow regulated by gravity culverts which divert to Littlejohn Creek. Maximum discharge listed at site and datum then in use.

Station located 0.2 mile above Farmington-Bellota Highway Bridge, 0.2 mile east of Bellota. Flow regulated by Hogan Reservoir. During irrigation season, flow is reregulated by boards placed across diversion dam immediately downstream which control diversion of water between the Calaveras River and Mormon Slough. This is flow from Calaveras River which is returned to the river via Stockton Diverting Canal. Flows are computed for the period when boards are not placed across the diversion dam.

Station located at Tracy Pumping Plant at intake to canal, 6 miles southeast of Byron, 10 miles northwest of Tracy. Discharge computed from records of operation of pumps. Water is diverted from Sacramento-San Joaquin Delta by way of Old River and a dredged channel to the Tracy Pumping Plant where it is lifted about 200 feet into the canal. Records are furnished by the U. S. Bureau of Reclamation.

Station located at Pumping Plant No. 1, 0.7 mile east of Oakley, 2.6 miles northwest of Knightsen. Water is diverted from Sacramento-San Joaquin Delta by way of Old River, Rock Slough, and a dredged channel. A series of 4 pumping plants lift the water about 115 feet into canal. Recording flow meters on pumps. Records furnished by U. S. Bureau of Reclamation.

Station located at U. S. Highway 70 Bridge, 2 mi. west of Hallelujah Junction. Tributary to Honey Lake. State-discharge relationship affected by ice at times. Drainage area is approximately 100 sq. mi.

TABLE B-6
DIVERSIONS

This table includes diversion data on the Sacramento River, furnished by the U. S. Bureau of Reclamation, and on the Mokelumne River, furnished by the East Bay Municipal Utility District. The data are published as received from these agencies.

Additional diversion data not included in this table may be obtained from the Water Rights Division of the State Water Resources Control Board.

c Data furnished by City of Vallejo.

d Amounts are total diversion into the canal; only an unknown portion of this is exported from Northeastern California.

TABLE B-10

MAXIMUM AND MINIMUM GAGE HEIGHTS

This table contains the historical maximum and the annual maximum and minimum gage heights for selected stations formerly reported in the "Daily Mean Gage Heights" table.

Discharges corresponding to the reported maximum gage heights are included in the table. Due to possible changes in gage height-discharge relationships, the discharges may not be record or annual maximums. Discharges are rounded off in accordance with the procedures described in Table B-5, "Daily Mean Discharge".

Historic data include the location, period of record, gage height datum, and a brief description of each station.

TABLE B-10 (Continued)

MAXIMUM AND MINIMUM GAGE HEIGHTS

Station Name: SACRAMENTO RIVER AT KESWICK Station Number A21010 Water Year: 1973
 Location: LAT 40 36 04 LONG 122 26 36 NW Sec 28 T32N R5W MDB&M Period of Record: 1938 to DATE
 Historic: Maximum Gage Height: *47.20 Discharge: *186,000 cfs Date: 2-28-40 Time: Zero of Gage: 495.01 USCGS
 32.20 Discharge: 78,900 cfs Date: 1-24-70 Time: Zero of Gage: 479.81 USCGS
 Water Year: Maximum Gage Height: 25.37 Discharge: 41,200 cfs Date: 1-19-73 Time: 0115 Zero of Gage: 479.81 USCGS
 Minimum Gage Height: Date: Time:

* - Prior to regulation by Shasta Lake

Station located 0.8 mile below Keswick Dam, 1.6 miles below Keswick. Flow regulated by Shasta Lake. Records furnished by USGS. Drainage area, excluding Goose Lake Basin, is approximately 6,468 square miles.

Station Name: SACRAMENTO RIVER ABOVE BEND BRIDGE NEAR RED BLUFF Station Number: A02788 Water Year: 1973
 Location: LAT 40 17 19 LONG 122 11 08 NE Sec 15 T28N R3W MDB&M Period of Record: 1967 to DATE
 Historic: Maximum Gage Height: 36.60 Discharge: 157,000 cfs Date: 1-24-70 Time: Zero of Gage: 0.00 Local
 Water Year: Maximum Gage Height: 24.00 Discharge: 82,300 cfs Date: 1-16-73 Time: 1600 Zero of Gage: 0.00 Local
 Minimum Gage Height: Date: Time:

Station located 2.7 miles upstream from Bend Bridge, 8.1 miles NE of Red Bluff. Records furnished by USGS. Drainage area is 8,900 square miles.

Station Name: SACRAMENTO RIVER AT VINA BRIDGE Station Number: A02700 Water Year: 1973
 Location: LAT 39 54 34 LONG 122 05 31 NE Sec 28 T24N R2W MDB&M Period of Record: 1945 to DATE
 Historic: Maximum Gage Height: 91.48 Discharge: 171,000 cfs Date: 1-24-70 Time: 0530 Zero of Gage: 100.00 USED
 Water Year: Maximum Gage Height: 84.89 Discharge: 100,000 cfs Date: 1-16-73 Time: 2000 Zero of Gage: 97.15 USCGS
 Minimum Gage Height: 66.14 Discharge: 6,380 cfs Date: 10-5-72 Time: 1600

Station located 250 feet above Vina-Corning Highway Bridge, 2.6 miles SW of Vina. The maximum discharge of record is for the main river channel and does not include water by-passing the station on the left bank. Flow regulated by Shasta Lake since December 30, 1943. Approximately 190,000 acre-feet diverted from the river between Keswick and Vina in addition to diversions from the tributaries. Transbasin diversions from the Trinity River to Whiskeytown Reservoir via Judge Francis Carr Powerplant began in April 1963. Drainage area, excluding Goose Lake Basin, is approximately 10,930 square miles.

Station Name: SACRAMENTO RIVER AT HAMILTON CITY Station Number: A02630 Water Year: 1973
 Location: LAT 39 45 07 LONG 121 59 43 NE Sec 20 T22N R1W MDB&M Period of Record: 1927 to DATE
 Historic: Maximum Gage Height: *22.60 Discharge: 350,000 E cfs Date: 2-28-40 Time: Zero of Gage: 127.9 USED
 50.77 Discharge: 156,000 cfs Date: 1-24-70 Time: Zero of Gage: 100.0 USED
 Water Year: Maximum Gage Height: 44.47 Discharge: 97,500 cfs Date: 1-18-73 Time: 2315 Zero of Gage: 96.5 USCGS
 Minimum Gage Height: 27.91 Discharge: 6,180 cfs Date: 10-8-72 Time: 0900

* - Prior to regulation by Shasta Lake

Station located at Gianella Bridge, State Highway 32, 1.0 mile NE of Hamilton City. The maximum discharges of record since February 1940 are for the main river channel and do not include water by-passing the station on the left bank. Flow regulated by Shasta Lake since December 30, 1943. Approximately 950,000 acre-feet diverted from the river between Keswick and Hamilton City in addition to diversions from the tributaries. Transbasin diversions from the Trinity River to Whiskeytown Reservoir via Judge Francis Carr Powerplant began in April 1963. Drainage area, excluding Goose Lake Basin, is approximately 11,060 square miles.

Station Name: SACRAMENTO RIVER AT ORD FERRY Station Number: A02570 Water Year: 1973
 Location: LAT 39 37 39 LONG 121 59 28 SE Sec 32 T21N R1W MDB&M Period of Record: #1921 to DATE

- 1921 to 1941 Flood season only

Station located 0.1 mile below Ord Ferry. Records of flows in excess of 70,000 cubic feet per second are not reliable due to an undetermined amount of water by-passing the station via Butte Basin. Flow regulated by Shasta Lake since December 30, 1943. Approximately 980,000 acre-feet diverted from the river between Keswick and Ord Ferry in addition to diversions from the tributaries. Transbasin diversions from the Trinity River to Whiskeytown Reservoir via Judge Francis Carr Powerplant began in April 1963. Drainage area, excluding Goose Lake Basin, is approximately 12,480 square miles.

Station located at State Highway 99 bridge, 2.9 miles below Bear River, 0.5 mile southwest of Nicolaus. Backwater at times affects the stage discharge relationship. Flow partly regulated by reservoirs and powerplants. Maximum discharge of record is for period 1943 to date. Records furnished by U. S. Geological Survey. Drainage area is approximately 5,921 square miles (revised).

8 - Irrigation season only.

Station located at H Street Bridge. Backwater at times affects the stage-discharge relationship. Maximum discharge of record listed is for period 1921, 1929-1932, 1934 to date. Maximum gage height listed does not necessarily indicate maximum discharge. Drainage area is 1,937 square miles.

♂ - Irrigation season only.

Station located on east shore, 14 mi. NW of Susanville.

TABLE B-12

DAILY TIDES

This table shows the water surface elevations for the daily high and low tides or the daily maximum and minimum water surface elevations for days where normal tide patterns did not occur.

The reported elevations are referenced to USC&GS mean sea level datum established at the Golden Gate in 1929. Water surface elevation at each station referenced to this datum is obtained by subtracting the zero of the gage, shown under "Datum of Gage", from the reported elevations.

Example:

1. Pages 162 and 163 "Sacramento River near Freeport". From Page 163 the zero of the gage since 1964 = 0.00' USC&GS datum. Elevations referenced to mean sea level of the Golden Gate are as reported.
2. Pages 164 and 165. "Sacramento River at Snodgrass Slough". From Page 165 the zero of the gage since 1964 = -3.00' USC&GS datum. Elevations referenced to mean sea level at the Golden Gate are obtained by subtracting 3.00 from the reported values.

Station located at toe of Frenchman Dam on Little Last Chance Creek, 7.1 miles north of Chilcoot.

Frenchman Dam was completed in October 1961 and storage began in November 1961. The lake has a usable capacity of 53,582 acre-feet between elevations 5517 feet (invert of intake) and 5588 feet (crest of spillway). Not available for release, 1,835 acre-feet.

Daily content given is shown at 2400 hours.

Drainage area is 81.1 square miles.

Station located near left abutment of Grizzly Valley Dam on Big Grizzly Creek, 5.3 miles north of Portola. Grizzly Valley Dam, creating Lake Davis, was completed in September 1967; however, storage by the contractor in order to test the outlet works, began on October 18, 1966. The lake has a usable capacity of 84,043 acre-feet between elevations 5700 feet (top of low-level intake) and 5775 feet (crest of spillway). Not available for release 108 acre-feet. Daily content given is shown at 2400 hours. Drainage area is 44.0 square miles.

Station located at toe of Antelope Dam on Indian Creek, 1.3 miles south of Boulder Creek Guard Station, 12 miles northeast of Genesee.

Antelope Dam was completed in July 1964; however, usable storage began on November 25, 1963. The lake has a usable capacity of 22,239 acre-feet between elevations 4950 feet (lip of intake tower) and 5002 feet (crest of spillway).

Daily content given is shown at 2400 hours except from October 1 through March 15. Data for this period is from observations made during the day by field personnel.

Drainage area is 68.6 square miles.

Recorder located near intake structure at left end of Oroville Dam, on the Feather River, 4 miles northeast of Oroville. Lake Oroville has a normal gross storage capacity of 3,538,000 acre-feet at the normal maximum water surface elevation of 900 feet. The active operating storage capacity is 2,686,000 acre-feet above the elevation 640 feet (minimum power pool). Drainage area is 3,611 square miles. Storage began November 14, 1967.

Station located near left abutment of Camp Far West Dam on the Bear River 6.4 miles east of Wheatland and 11.8 miles northwest of Sheridan. Camp Far West Reservoir, owned and operated by the South Sutter Irrigation District, began storage September 30, 1963. Station was installed March 1966, jointly by the South Sutter Irrigation District and the Department of Water Resources. The lake has a usable capacity of 139,600 acre-feet between the elevation 175.00 feet and 316.3 feet (top of spillway gate). Drainage area is 283 square miles. Daily content given is shown at 2400 hours.

TABLE B-14
DAILY INFLOW

This table presents the daily inflow rates to Folsom, Shasta, and Whiskeytown Lakes. The daily inflow rates were computed from information about changes in storage, releases, spills, precipitation, and evaporation. The computed values represent the flow at each damsite if the dam did not exist.

The figures contained herein are computed inflow to Shasta Lake and take into account change in storage, release, spill, precipitation and evaporation. They are representative of the natural flow which would pass the damsite (9.5 miles north of Redding) if the dam had not been constructed. Records furnished by USBR. Drainage area, excluding Goose Lake Basin, is 6,665 square miles.

Shasta Lake has a usable capacity of 4,377,000 acre-feet between elevations 737.75 and 1065.0 feet above mean sea level. Not available for release, 115,700 acre-feet.

CORRECTIONS AND REVISIONS TO
PREVIOUSLY PUBLISHED REPORTS

Corrections and revisions pertain to bulletins of surface water flows published from 1924 to date. These publications are:

Report 1. "Report of Sacramento-San Joaquin Water Supervision". Published from 1924 through 1955.

Report 2. Bulletin No. 23, "Surface Water Flow". Published from 1956 through 1962.

Report 3. "Flood Flows and Stages in Sacramento and Northern San Joaquin Valleys". Published from 1913 through 1956.

Report 4. Bulletin No. 130, "Hydrologic Data: Volume II, Northeastern California". Published from 1963 to date.

Corrections and revisions to surface water data made prior to publication of Bulletin No. 130-68, "Hydrologic Data: Volume II, Northeastern California", are in Bulletin No. 130-67. This report contains corrections made since publication of Bulletin No. 130-67.

GROUND WATER MEASUREMENTS

This appendix contains summary and selected information concerning the level of ground water in wells within 37 ground water basins or areas in Northeastern California. Wells are selected to reflect the ground water conditions of the area. These wells are continuously reviewed and, when conditions dictate, replacement wells are located and measured.

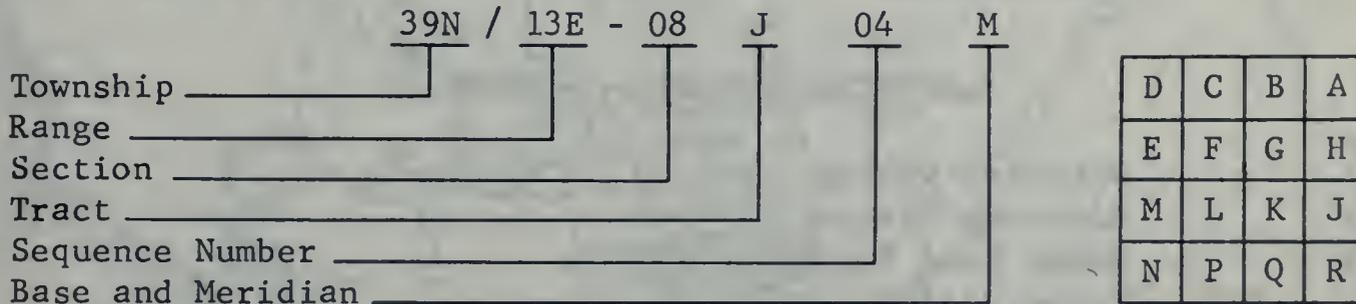

Earlier editions of this report contained a tabulation of individual measurements of ground water levels at wells. This type of data collected by the Department will be available at the various district offices of the Department. Please see the introduction at the front of this volume for the addresses of these district offices.

Table C-1 shows the average change in ground water levels for the various basins in Northeastern California from spring 1972 to spring 1973. This table also shows the number of well measurements collected in the various areas. Figure C-2 contains graphical presentations of the average levels of ground water in the spring for the past several years. Figure C-3 is a graphical representation of the fluctuation of ground water level in certain selected wells for the past several years. An attempt has been made to select wells that represent conditions in the basin where the well is located. However, some caution in the use of these data is in order because ground water conditions can vary markedly with relatively small changes in horizontal location.

Two numbering systems are used by the Department to facilitate processing of water level measurement data. The two systems are the Region and Basin Designation and the State Well Numbering System. The regions used in Bulletin No. 130 are geographic areas defined in Section 13200 of the Water Code. This volume comprises the northern portions of Central Valley Region No. 5 and Lahontan Region No. 6. A decimal system of the form 0-00.00 has been selected according to geographic regions, ground water basins, and subbasins or subareas as follows:

The State Well Numbering System is based on township, range, and section subdivisions of the public land survey. The number of a well, assigned in accordance with this system, is referred to as the State Well Number, as illustrated below on the left.

This number identifies and locates the well. In the example, the well is in Township 39 North, Range 13 East, Tract J of Section 8, referenced to the Mount Diablo Base and Meridian. A section is divided into 40-acre tracts as shown above on the right. Sequence numbers in a tract are generally assigned in chronological order. The example designates the fourth well to be assigned a number in Tract J.

APPENDIX D

SURFACE WATER QUALITY DATA

This appendix contains surface water quality data collected at 206 stream and estuarine stations in Northeastern California during the period from October 1, 1972, through September 30, 1973. Samples were collected by the Department of Water Resources, U. S. Bureau of Reclamation, U. S. Geological Survey, and U. S. Army, Corps of Engineers.

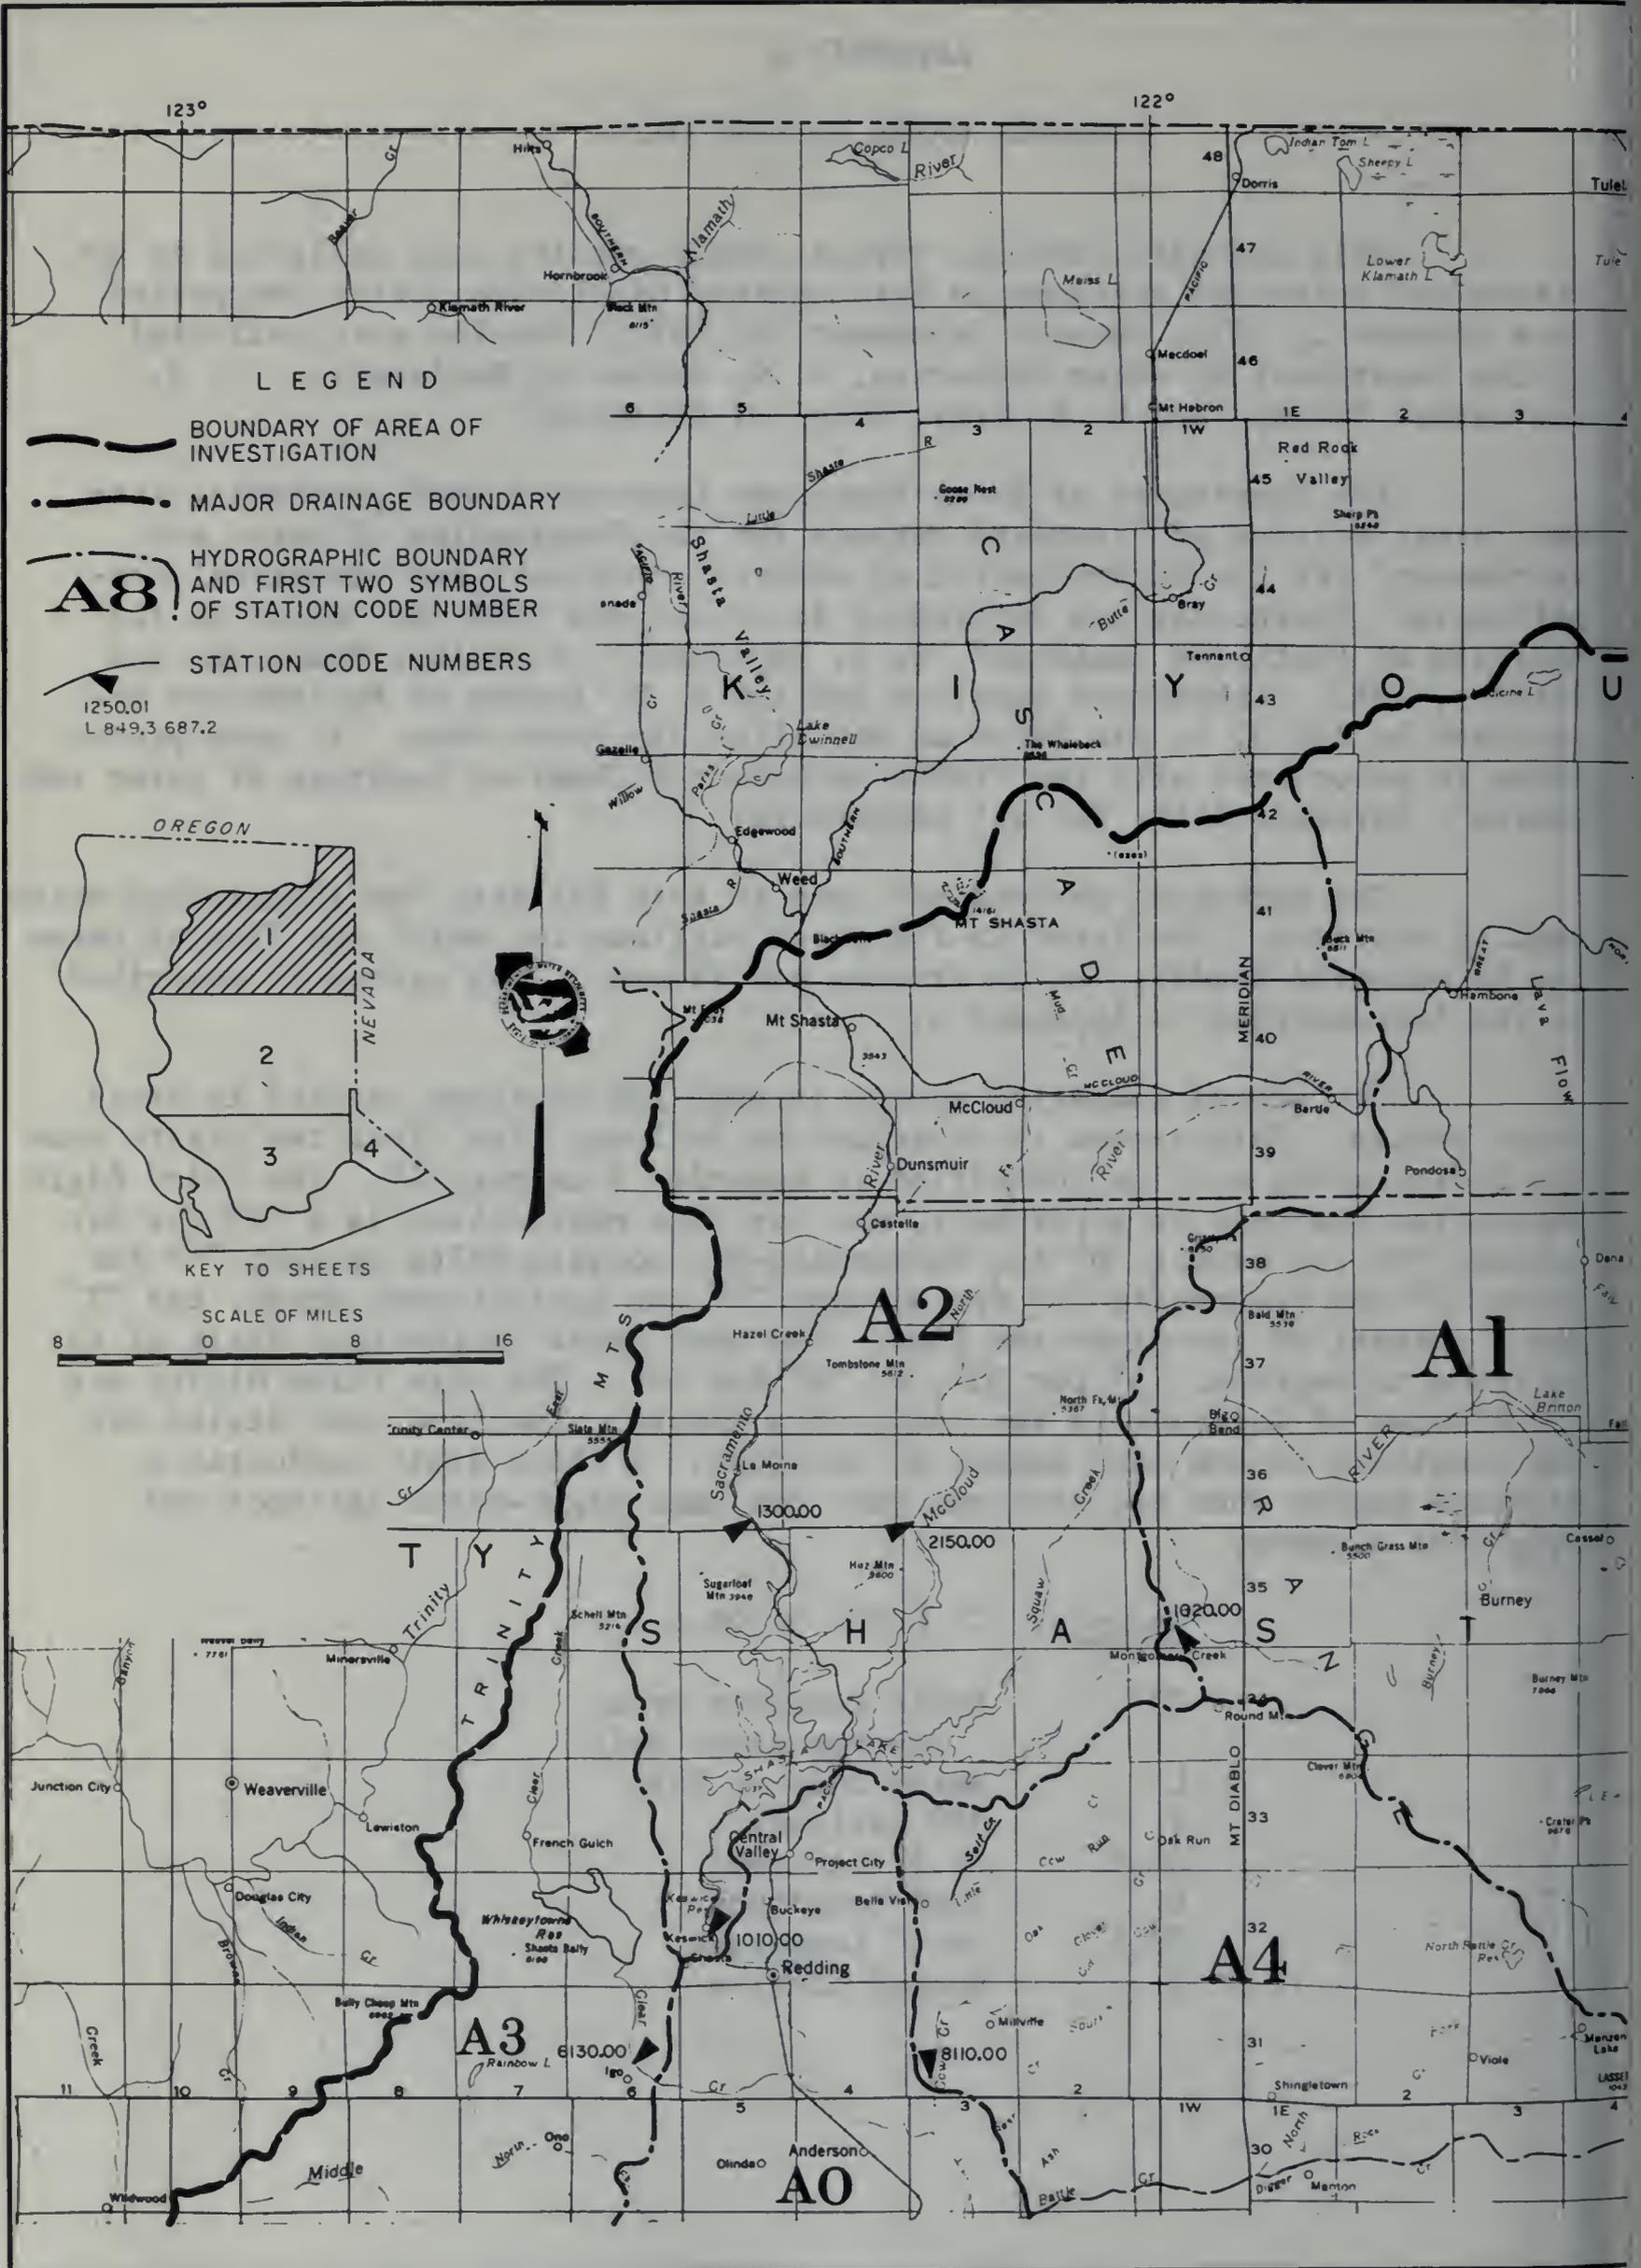

The Department of Water Resources Laboratory used procedures from the latest edition of "Standard Methods for the Examination of Water and Wastewater" for the determination of mineral, nutrient, and biological constituents. Pesticides are determined in accordance with the "Guide to the Analysis of Pesticide Residues", U. S. Department of Health, Education and Welfare, 1965. Laboratory services for the U. S. Bureau of Reclamation are provided by the U. S. Air Force at McClellan Air Force Base. It uses procedures in accordance with the "FWPCA Methods for Chemical Analysis of Water and Wastes", November 1968, for all parameters.

Two numbering systems are used in this bulletin for identifying water quality stations. The first is for those stations for which the flow of water can be measured readily, as in streams and rivers. This system is described in the introduction to Appendix B.

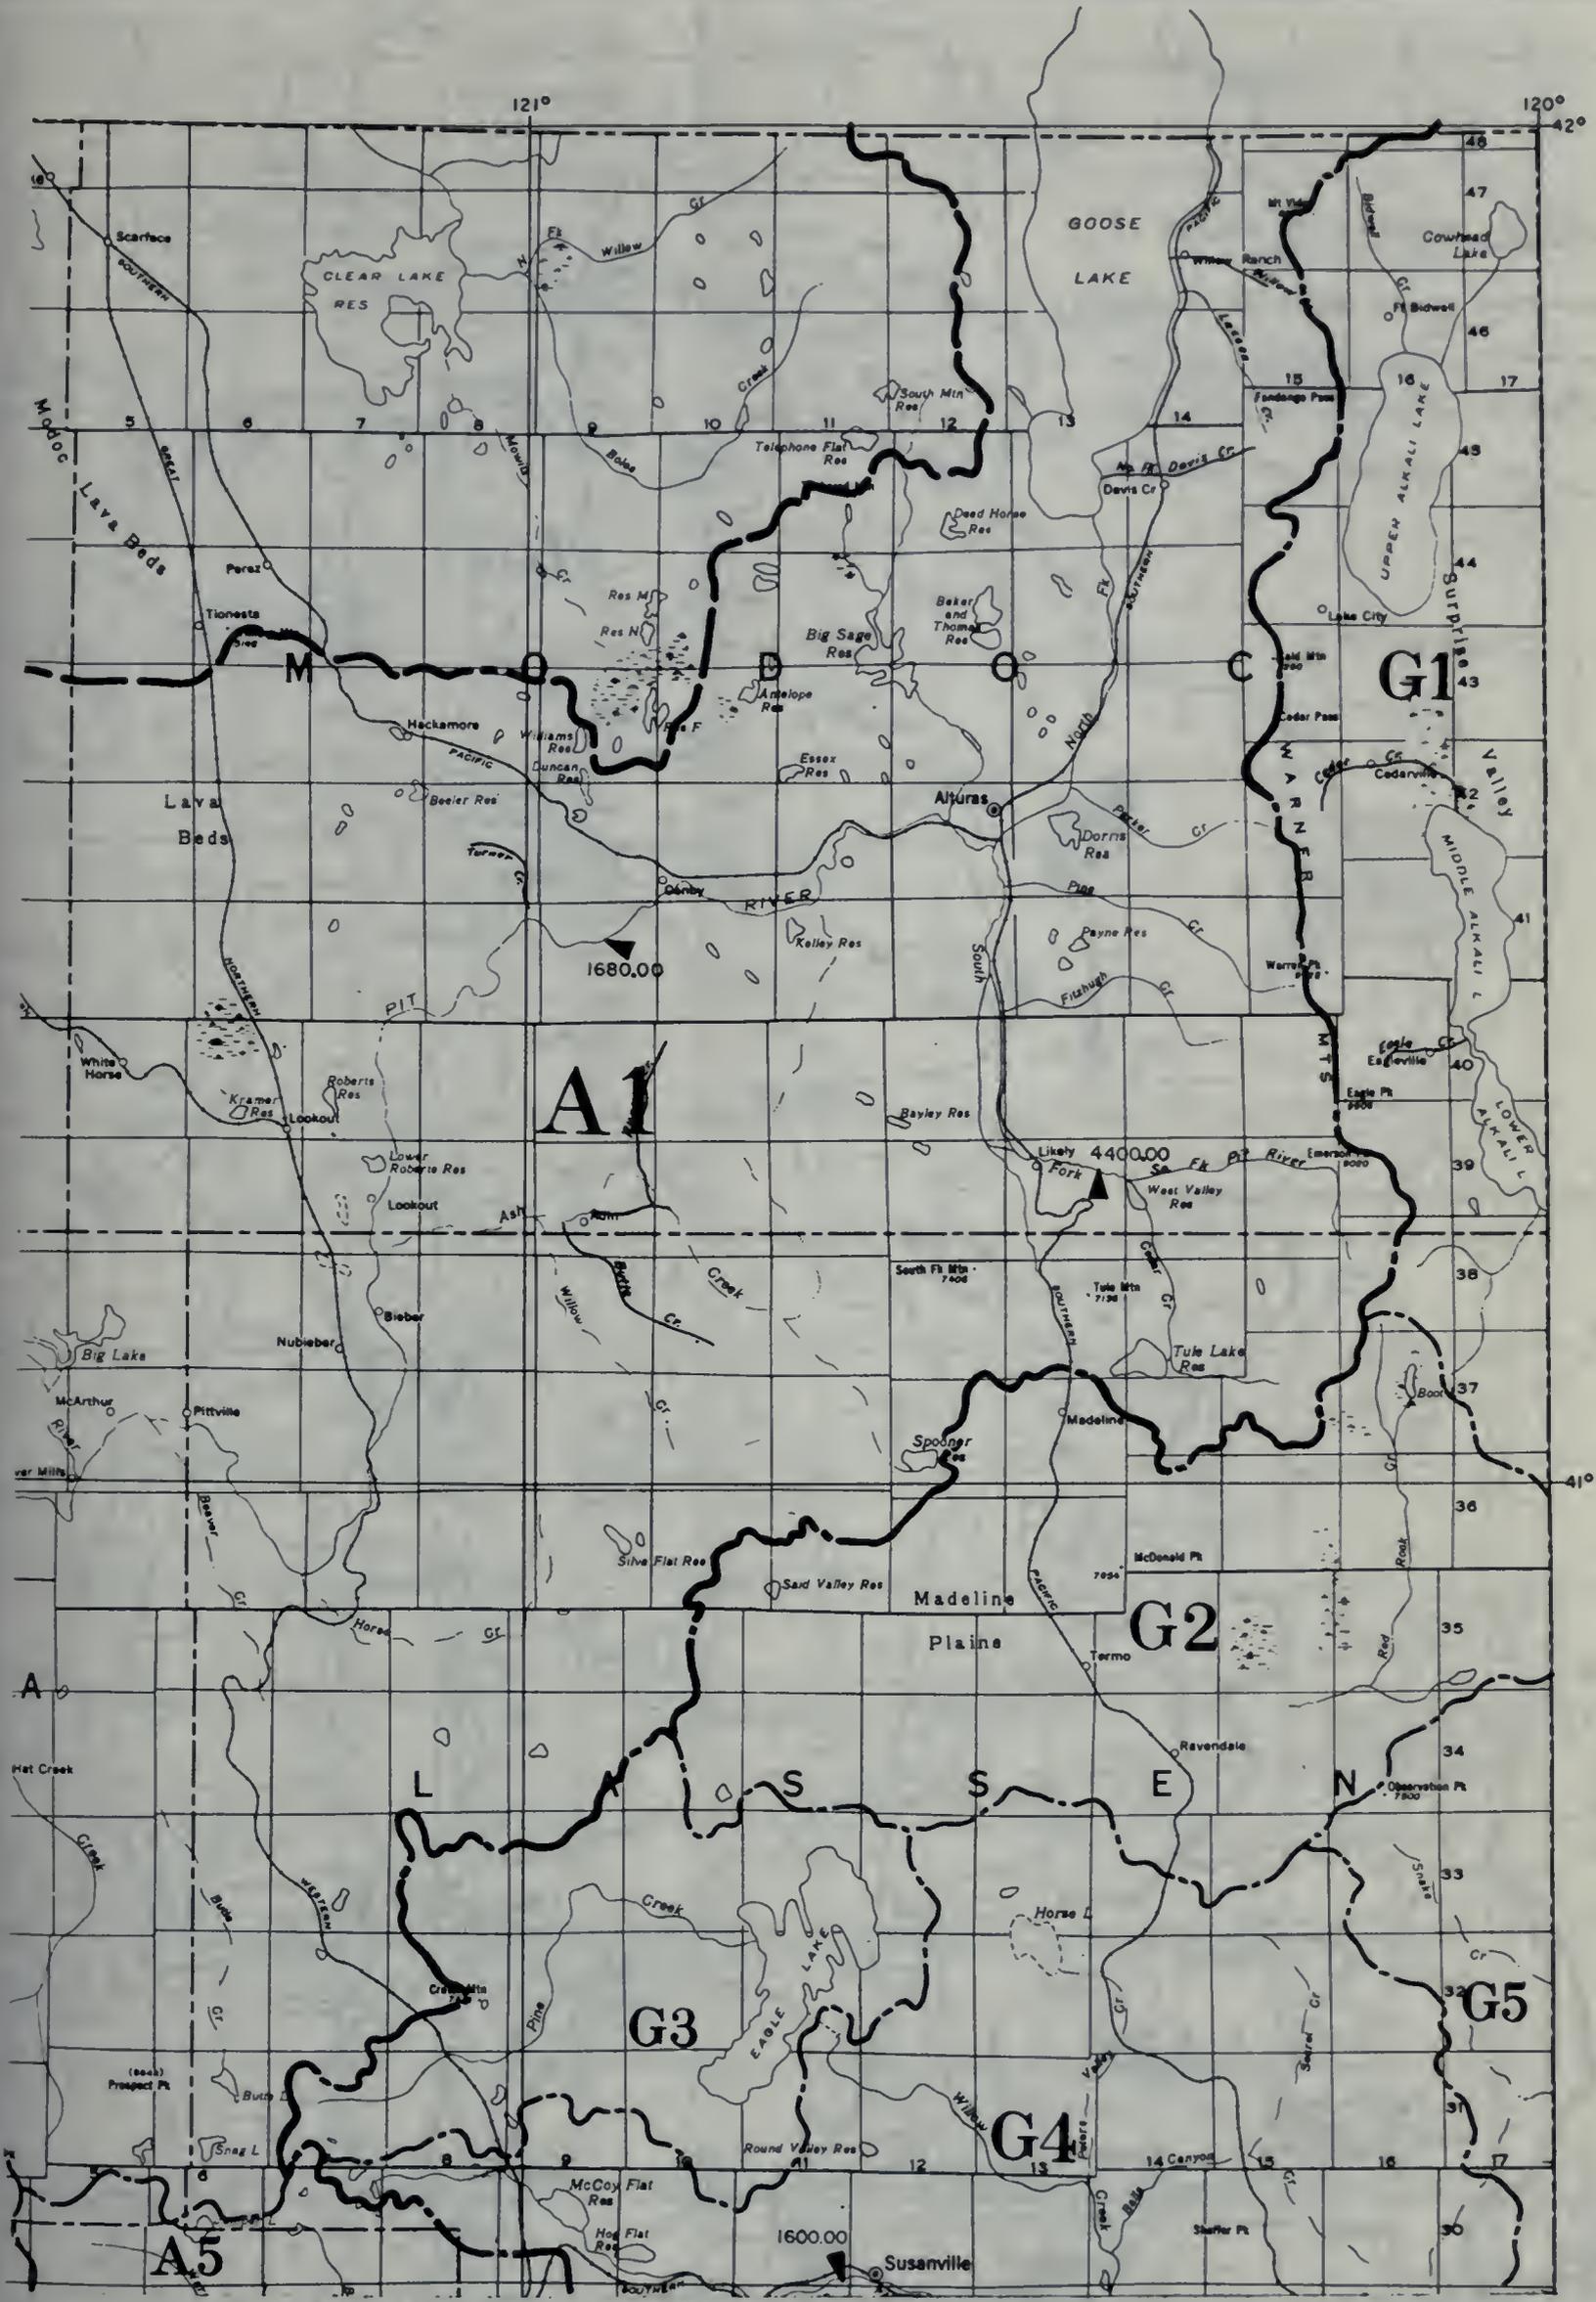

The second numbering system is used for stations located in broad water bodies. This system is described as follows. The first two digits show the hydrographic unit as identified in Appendix B on page 19. The third digit identifies the type of water body, and for this publication is a "B" for Bay system; "C" for canal; "D" for Sacramento-San Joaquin Delta system; "L" for lake; "R" for reservoir; "S" for slough; "V" for agricultural drain; and "X" for a channel of two-direction flow. The next digit is the last digit of the latitude in degrees, "3" for 33°, or "9" for 29°. The next three digits are the minutes of latitude to the tenth of a minute. The last four digits are the longitude in the same manner as latitude. A fifth digit indicates a sequence number when two stations have the same eight-digit latitude and longitude numbers.

Example: G7 L 904.5 008.4 2

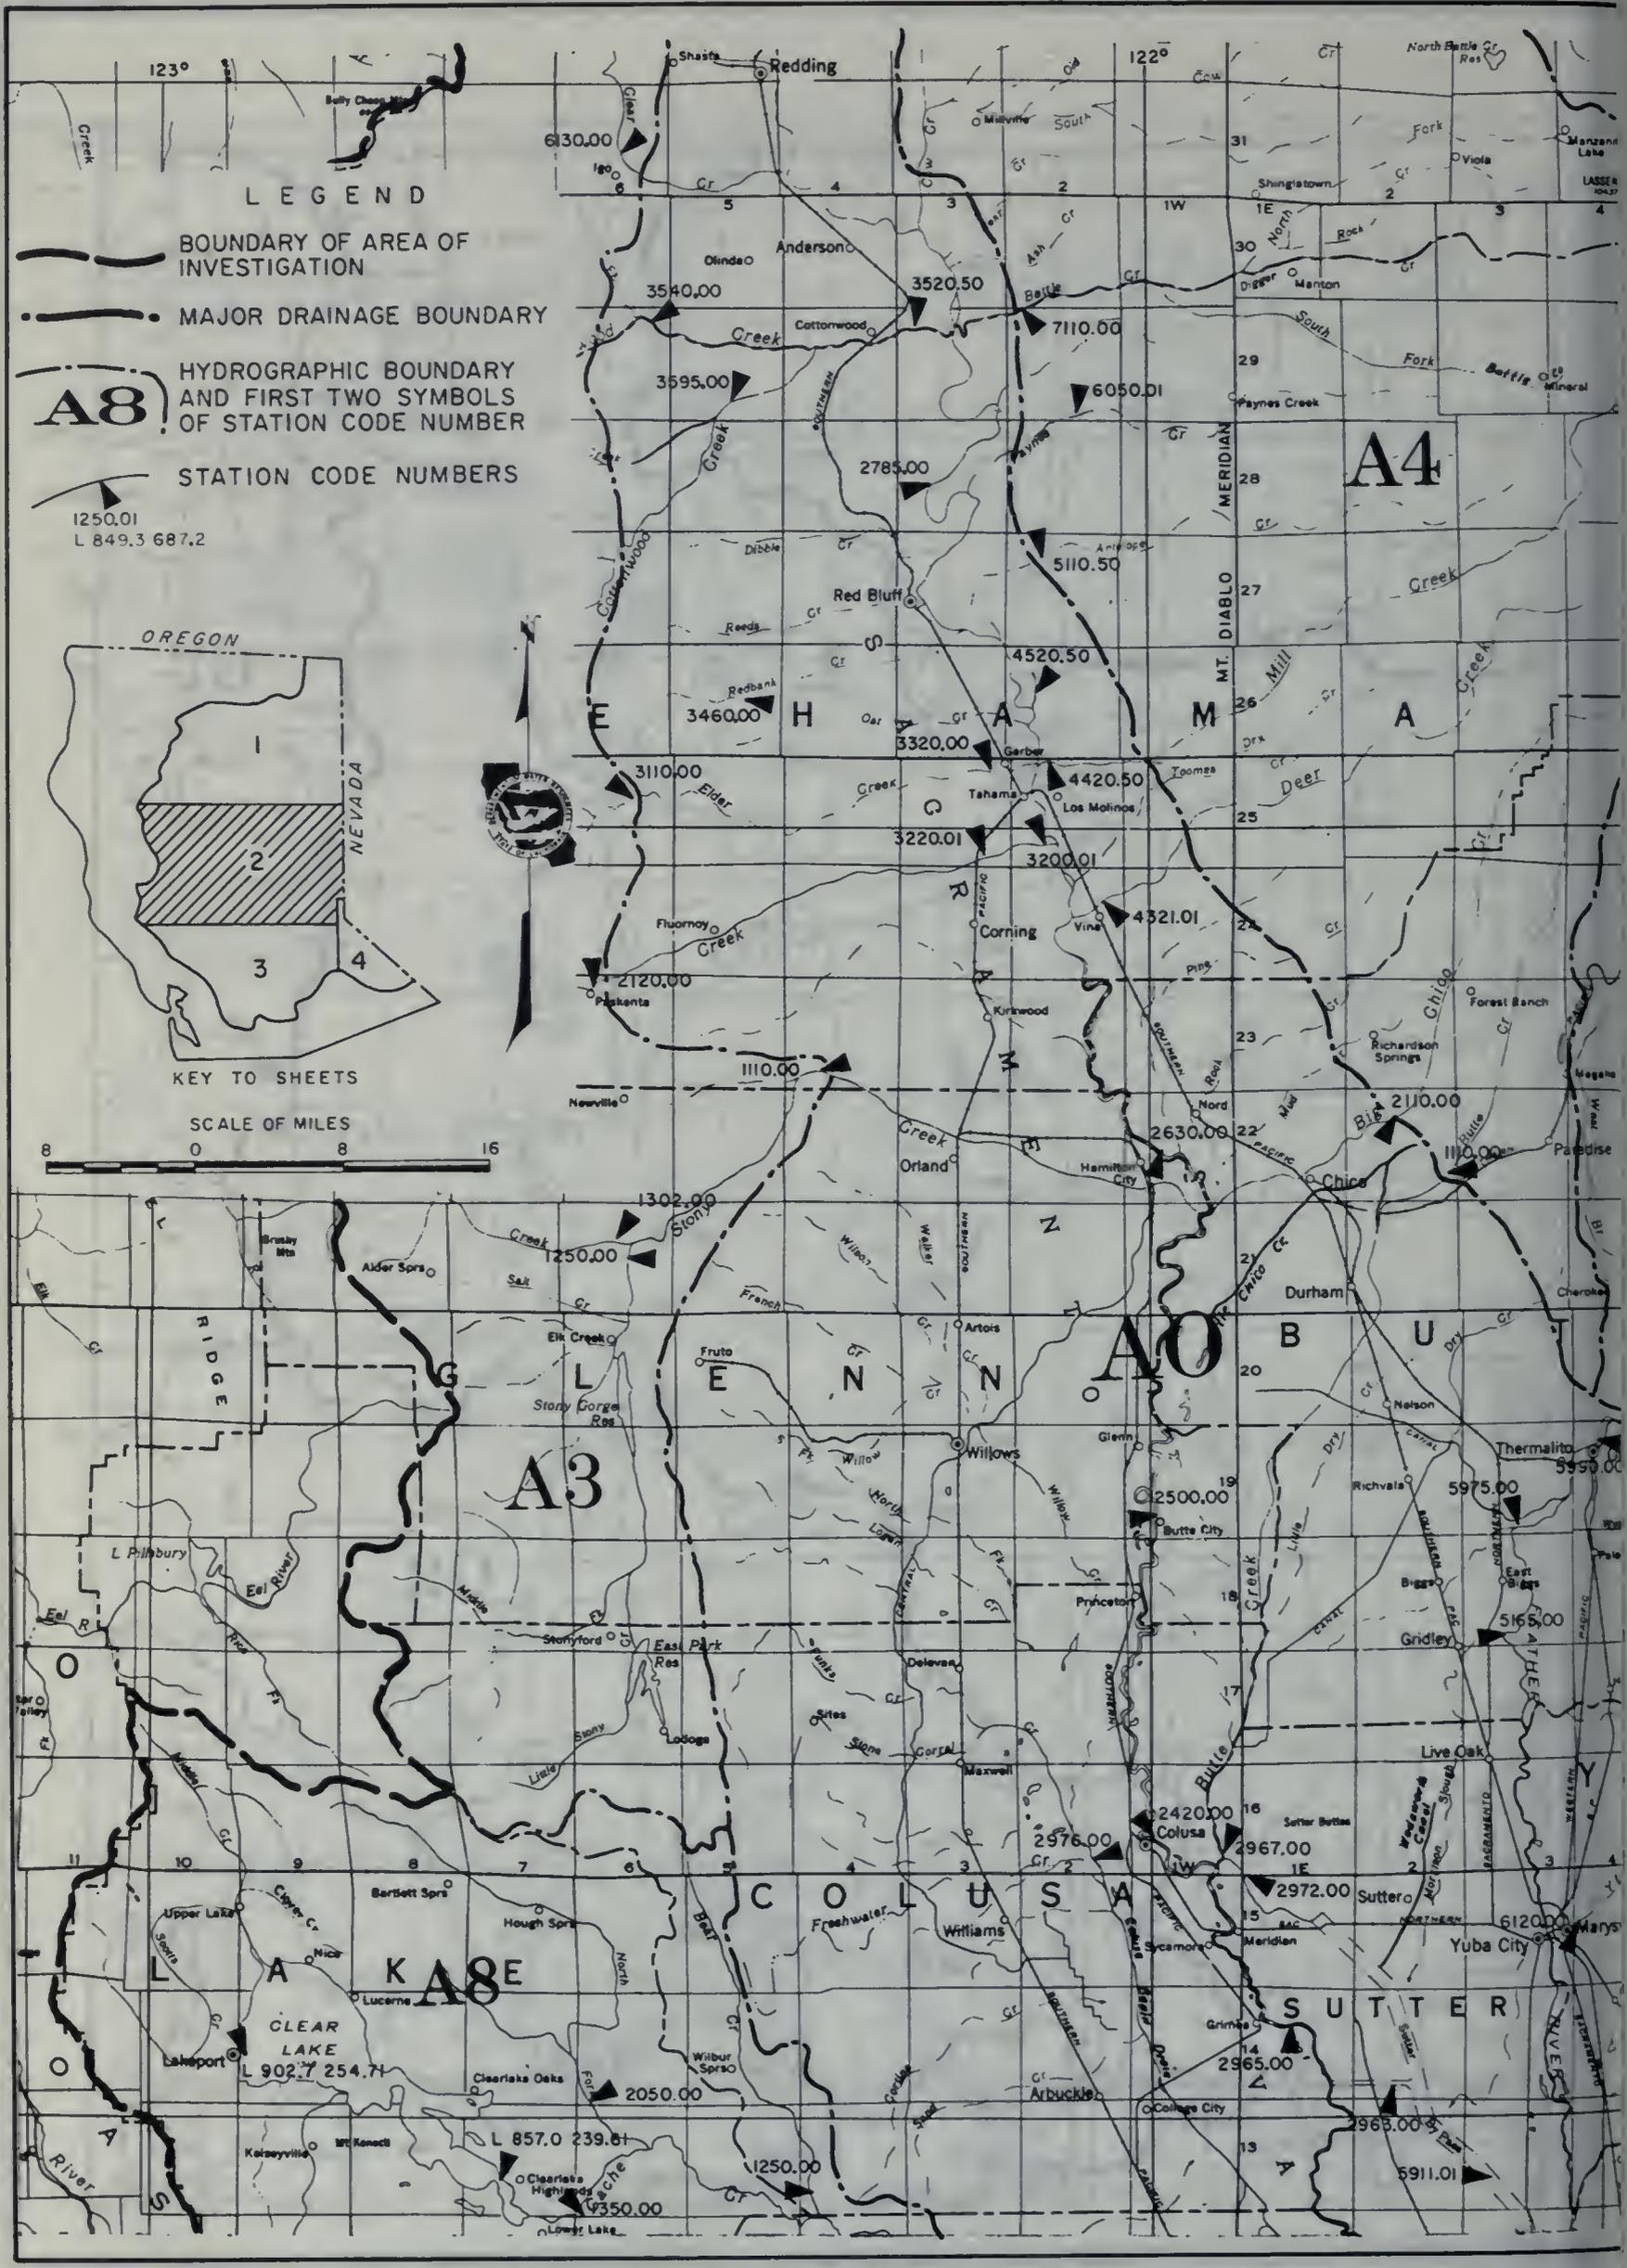

G7	North Lahontan Area, Truckee River Unit
L	Water Body -- Lake
9	39° Latitude
04.5	04.5' Latitude
0	120° Longitude
08.4	08.4' Longitude
2	Second Station

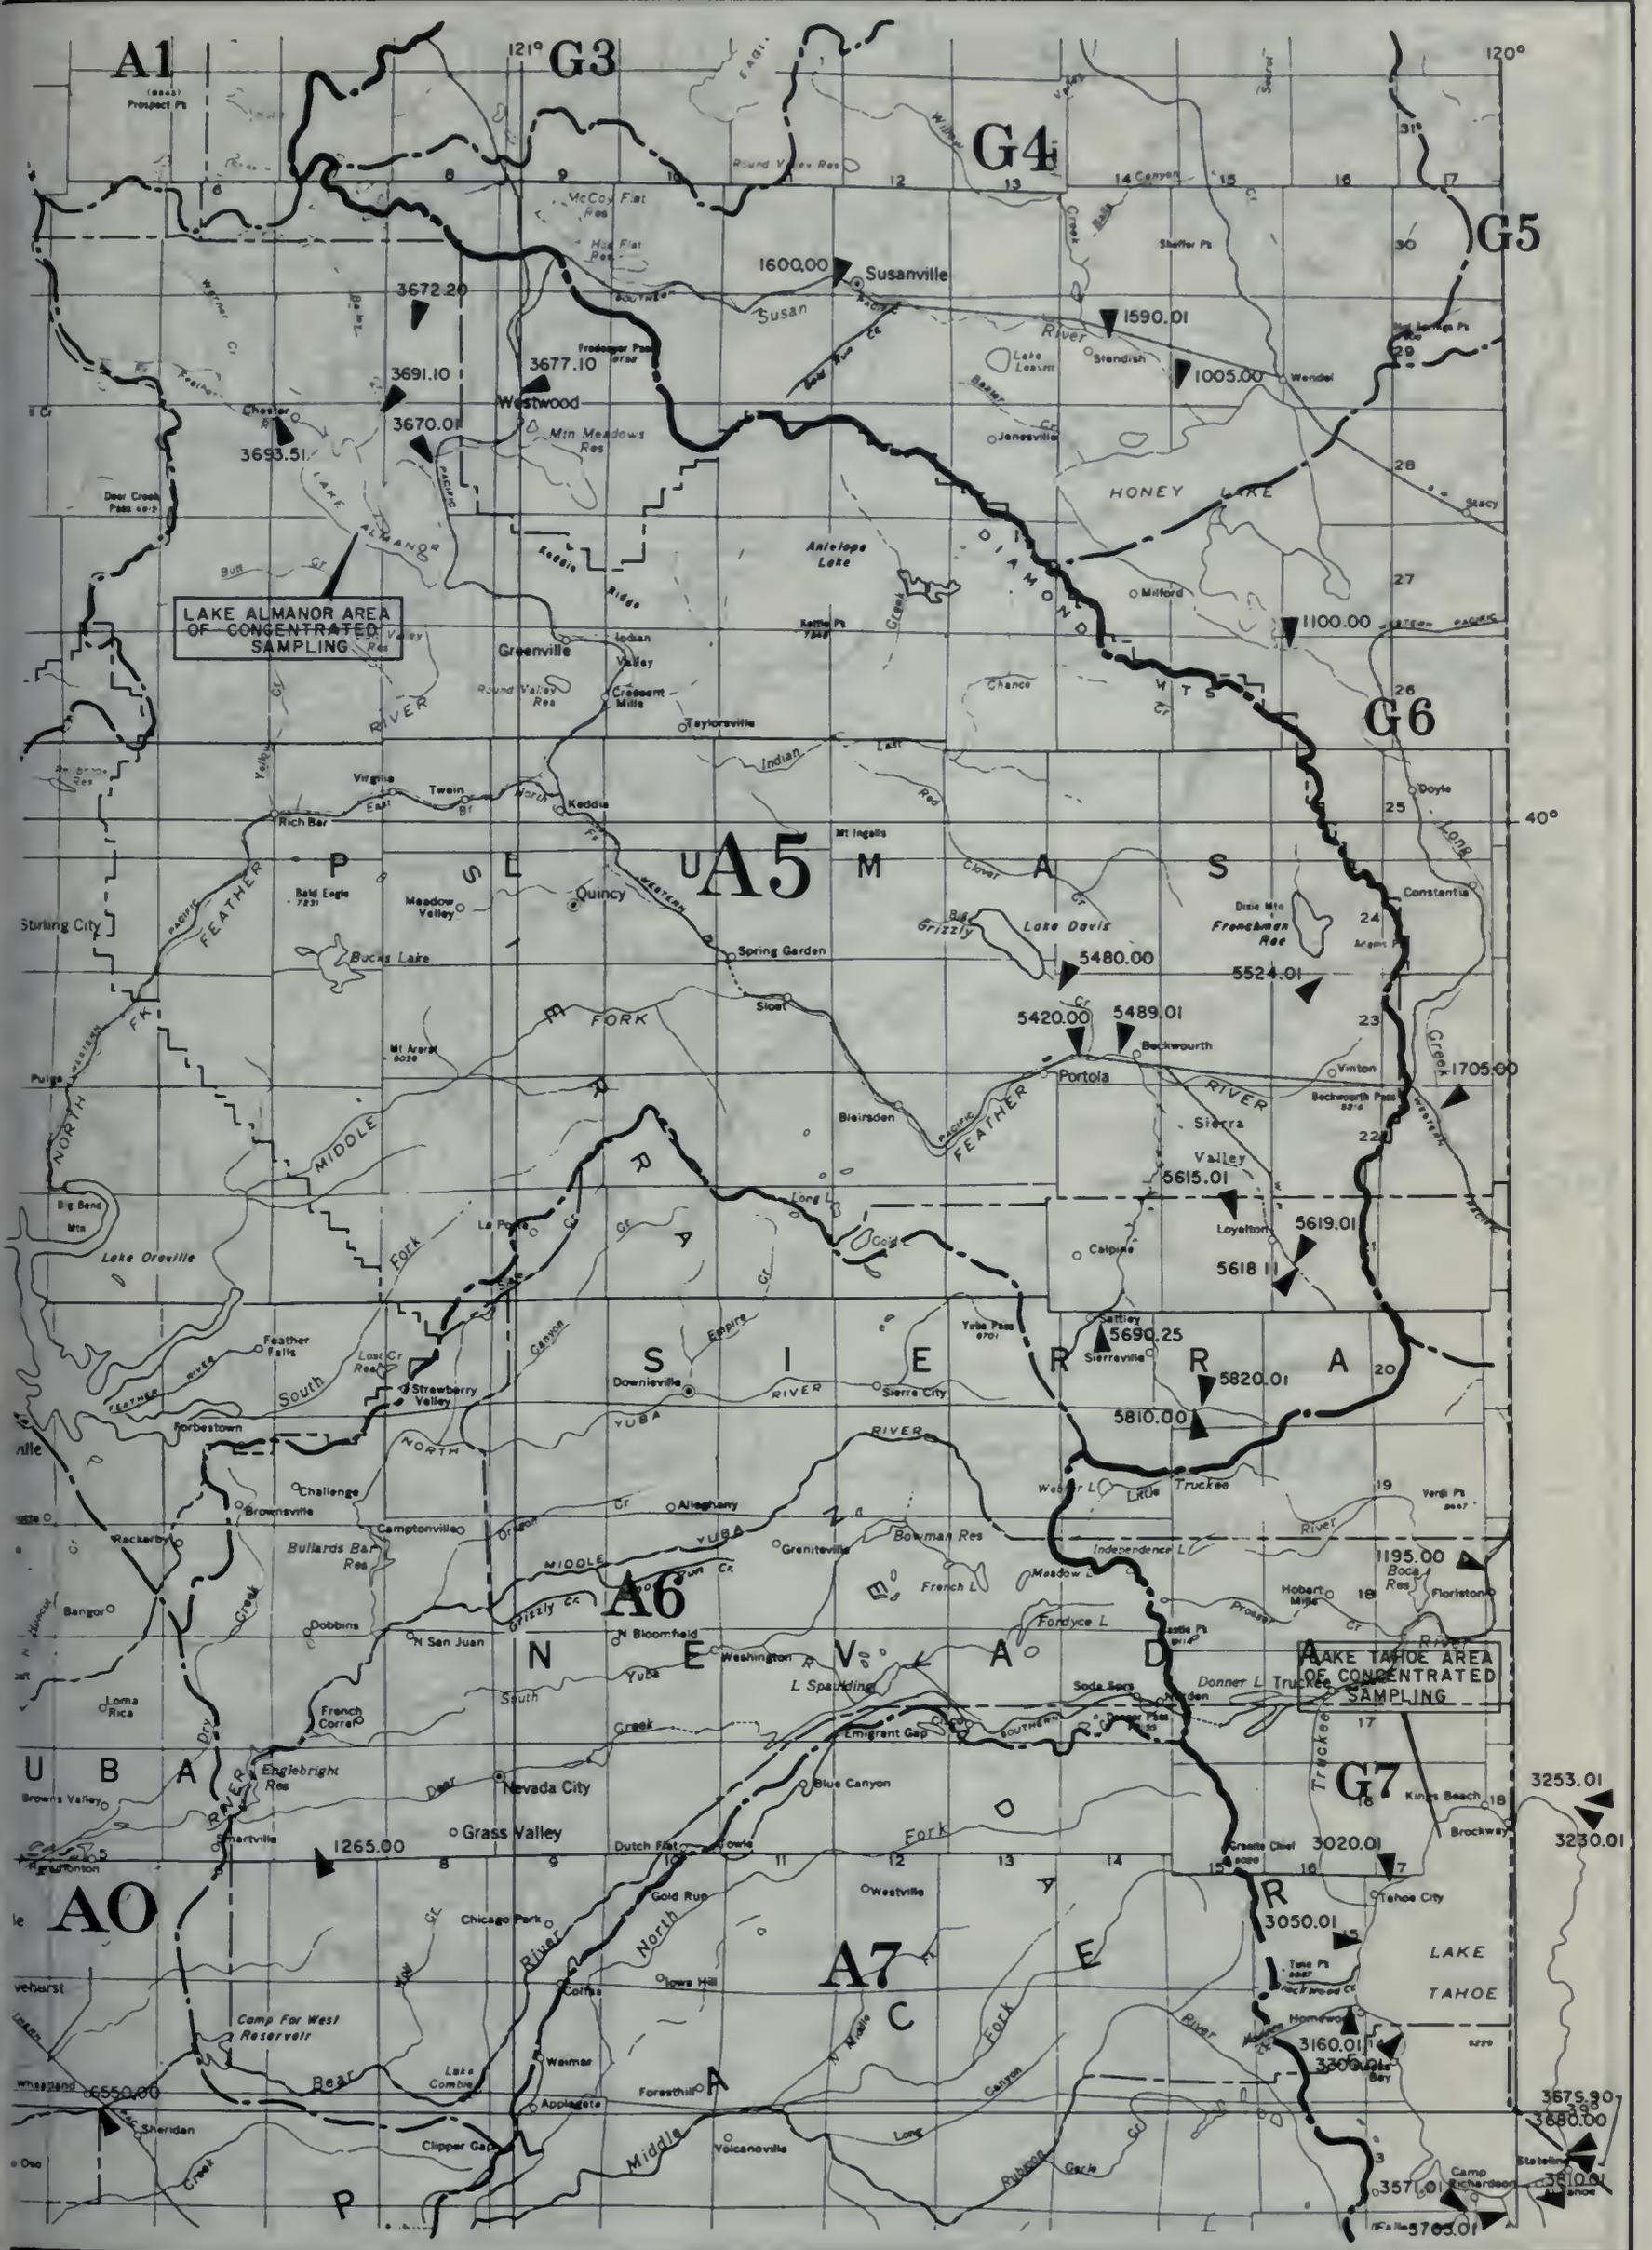

SURFACE WATER QUALITY SAMPLING STATIONS

TABLE D-2

MINERAL ANALYSES OF SURFACE WATER

Sampler and Lab Agency Codes

- 5000 - U. S. Geological Survey
- 5001 - U. S. Bureau of Reclamation
- 5050 - Department of Water Resources
- 5073 - Department of Fish and Game

Abbreviations

- TIME - Pacific Standard Time on a 24-hour clock
- G.H. - Instantaneous gage height in feet above an established datum
- Q - Instantaneous discharge in cubic feet per second
- DEPTH - Depth in feet at which sample was collected (COM = Composite)
- DO - Dissolved oxygen content in milligrams per liter
- SAT - Percent of normal dissolved oxygen saturation
- TEMP - Water temperature at time of sampling in degrees Fahrenheit (F) and Celsius (C)
- PH - Measure of acidity (<7) or alkalinity (>7) of water
- EC - Electrical conductance in micromhos at 25° Celsius
- TDS - Gravimetric determination of total dissolved solids at 180° C
- SUM - Total dissolved solids by summation of analyzed constituents
- TH - Total hardness
- NCH - Noncarbonate hardness - any excess of total hardness over total alkalinity
- TURB - Jackson Turbidity Units measured with a Hellige Turbidimeter (E) or a Hack Nephelometer (A)
- SAR - Sodium adsorption ratio

PERCENT REACTANCE VALUE is determined by dividing the sum of the cations or anions in milliequivalents per liter into each constituent in milliequivalents per liter, arriving at a percentage. For a partial analysis, an approximate value is determined by multiplying the electrical conductance by 0.01 and using that as the cation or anion sum

Mineral Constituents

- | | | | | | |
|------|---|-------------|------|---|-----------|
| B | - | Boron | K | - | Potassium |
| CA | - | Calcium | MG | - | Magnesium |
| CL | - | Chloride | NA | - | Sodium |
| C03 | - | Carbonate | N03 | - | Nitrate |
| F | - | Fluoride | SI02 | - | Silica |
| HC03 | - | Bicarbonate | S04 | - | Sulfate |

TABLE D-3

MINOR ELEMENT ANALYSIS OF SURFACE WATER

Sampler and Lab Agency Codes

- 5000 - U. S. Geological Survey
- 5001 - U. S. Bureau of Reclamation
- 5006 - McClellan Air Force Base Laboratory
- 5050 - Department of Water Resources

Abbreviations

- TIME - Pacific Standard Time on a 24-hour clock
- DEPTH - Depth in feet at which sample was collected
- DISCH - Instantaneous discharge in cubic feet per second
- EC - Electrical conductance in micromhos at 25° Celsius
- TEMP - Water temperature at time of sampling in degrees Fahrenheit (F) and Celsius (C)
- PH - Measure of acidity (<7) or alkalinity (>7) of water
- CHROM (ALL) - All chromium
- CHROM (HEX) - Hexavalent chromium
- D - Dissolved
- T - Total

TABLE D-5

MISCELLANEOUS CONSTITUENTS IN SURFACE WATER

Sampler and Lab Agency Codes

- 5001 - U. S. Bureau of Reclamation
 5050 - Department of Water Resources

Abbreviations and Constituents

- TIME - Pacific Standard Time on a 24-hour clock
- TEMP - Water temperature at time of sampling in degrees Fahrenheit (F) or Celsius (C)
- EC - Electrical conductance in micromhos at 25° Celsius
- DO - Dissolved oxygen content in milligrams per liter
- G.H. - Instantaneous gage height in feet above an established datum
- PH - Measure of acidity (<7) or alkalinity (>7) of water: F - Field; L - Lab
- DISCH - Instantaneous discharge in cubic feet per second
- MBAS - Methylene blue active substance (a test for detergent surfactants) in milligrams per liter: L - Linear alkylate sulfonate; A - Alkyl benzene sulfonate
- DEPTH - Depth in feet at which sample was collected
- TURB - Jackson Turbidity Units
- T+L - Tannin and lignin as tannic acid in milligrams per liter
- CHLOR - Field determination of residual chlorine in milligrams per liter
- O+G - Oil and grease in milligrams per liter
- COLOR - True color in color units
- SET S - Settleable solids in milliliters per liter (ML/L) and milligrams per liter (MG/L): F - Field; L - Lab
- BOD - Biochemical oxygen demand in milligrams per liter: A - 4 days; B - 5 days; C - 6 days; D - 7 days; E - 100 days; F - other
- SUS S - Suspended solids in milligrams per liter: 5 - at 105°C; 8 - at 108°C
- COD - Chemical oxygen demand in milligrams per liter
- V SUS S - Volatile suspended solids in milligrams per liter
- CYANIDE - Cyanide in milligrams per liter
- PHENOLS - Phenols in milligrams per liter
- TOC - Total organic carbon in milligrams per liter
- DOC - Dissolved organic carbon in milligrams per liter
- IODIDE - Iodide in milligrams per liter
- T ODOR - Threshold odor number at 60°C
- BROMIDE - Bromide in milligrams per liter
- SULFITE - Sulfite in milligrams per liter
- T SULF - Total sulfides in milligrams per liter
- D SULF - Dissolved sulfides in milligrams per liter
- CC EXT - Carbon chloroform extract
- CA EXT - Carbon alcohol extract

TABLE D-6

NUTRIENT ANALYSIS OF SURFACE WATER

Sampler and Lab Agency Codes

5000	-	U. S. Geological Survey
5001	-	U. S. Bureau of Reclamation
5050	-	Department of Water Resources
5073	-	Department of Fish and Game

Abbreviations and Constituents

TIME	-	Pacific Standard Time on a 24-hour clock
G.H.	-	Instantaneous gage height in feet above an established datum
DISCH	-	Instantaneous discharge in cubic feet per second
TEMP	-	Water temperature at time of sampling in degrees Fahrenheit (F) and Celsius (C)
DEPTH	-	Depth in feet at which sample was collected
PH	-	Measure of acidity (<7) or alkalinity (>7) of water
EC	-	Electrical conductance in micromhos at 25° Celsius
TURB	-	Jackson Turbidity Units measured with a Hellige Turbidimeter (E) or a Hack Nephelometer (A)
F-CO2	-	Field determination of carbon dioxide in milligrams per liter
CACO3 P	-	Field Alkalinity (Phenol)
CACO3 T	-	Field Alkalinity (Total)
HC03	-	Bicarbonate in milligrams per liter
C03	-	Carbonate in milligrams per liter
NH3	-	Ammonia
NO2	-	Nitrite
NO3	-	Nitrate
F ORG N	-	Dissolved organic nitrogen
U ORG N	-	Organic nitrogen
F (NH3 +	-	Ammonia and dissolved organic nitrogen
U ORG N)	-	Ammonia and organic nitrogen
DIS	-	Dissolved acid hydrolyzable phosphate
A.H.P04	-	
F H3P04	-	Dissolved orthophosphate
U H3P04	-	Total orthophosphate
F TOT P	-	Dissolved total phosphorus
U TOT P	-	Total phosphorus

TABLE D-7

PESTICIDES IN SURFACE WATER

Sampler and Lab Agency Codes

5001 - U. S. Bureau of Reclamation
 5050 - Department of Water Resources

Abbreviations

TIME - Pacific Standard Time on a 24-hour clock
 TEMP - Water temperature at time of sampling in degrees Fahrenheit (F) and Celsius (C)
 EC - Electrical conductance in micromhos at 25° Celsius
 DO - Dissolved oxygen content in milligrams per liter
 PH - Measure of acidity (<7) or alkalinity (>7) of water
 G.H. - Instantaneous gage height in feet above an established datum
 DEP - Depth in feet at which sample was collected
 DISCHARGE - Instantaneous discharge in cubic feet per second

Pesticides

Chlorinated Hydrocarbons

<u>Code</u>	<u>Most Common Name</u>
ATRAZSIMAZ	- Atrazine and/or Simazine
DACTHAL	- Dacthal
DDT	- DDT (Code includes all Isomers; Para Para etc.)
DIELDRIN	- Dieldrin
UNKNOWN	- Complex chlorinated compound mixture as (Reported as DDT), one or more
NONE	
DETECTED	- No detectable amount of Chlorinated Hydrocarbons

Organic Phosphorus

DELNAV	- Delnav
DIAZINON	- Diazinon
PHORATE	- Phorate
UNKNOWN	- Complex mixture as Parathion (Reported as Parathion), one or more
NONE	
DETECTED	- No detectable amount of organic phosphorus

TABLE D-10

PHYTOPLANKTON ANALYSIS OF SURFACE WATER

Codes and Abbreviations

<u>Total</u>	- Total Phytoplankton per milliliter
<u>Bl-Gr</u>	- Blue-Green Algae
<u>Green</u>	- Green Algae
<u>Flag</u>	- Flagellates
<u>C/P</u>	- Centric over Pennate
<u>Samp</u>	- 5001 - U. S. Bureau of Reclamation 5050 - Department of Water Resources 5073 - Department of Fish and Game
<u>Lab</u>	- 5050 - Department of Water Resources Laboratory

Most Abundant Phytoplankton

<u>Blue-Green Algae</u>		<u>Green Algae</u>	
B 01	Agmenellum-Merismopedia	G 02	Ankistrodesmus
B 03	Anacystis	G 12	Oocystis
B 51	Anabaena	G 14	Pediastrum
		G 15	Scenedesmus
		G 19	Schroderia
		G 22	Selenastrum
		G 23	Tetraedron
		G 27	Treubaria
		G 33	Gloeocystis
	<u>Flagellates</u>		
F 02	Carteria (Chlamydomonas)		
F 03	Euglena		
F 08	Trachelomonas		
F 52	Dinobryon		
F 54	Dionflagellates (Dinophyceae)		
F 55	Ceratium (Dinoflagellate)		
F 56	Cryptomonas		
F 99	Unidentified		
	<u>Diatoms</u>		
	<u>Centric</u>		<u>Pennate</u>
D 02	Coscinodiscus	D 55	Asterionella
D 03	Cyclotella	D 57	Cocconeis
D 05	Melosira (fresh water)	D 60	Diatoma
D 06	Stephanodiscus	D 62	Fragilaria
		D 65	Navicula
		D 66	Nitzschia
		D 70	Synedra
		D 71	Tabellaria
		D 75	Epithemia

Appendix E

GROUND WATER QUALITY DATA

This appendix presents ground water quality data collected during the period from October 1, 1972, through September 30, 1973. The data were collected from a number of major ground water sources in Northeastern California in cooperation with other state, local, and federal agencies. During the 1973 water year, 595 wells were sampled in 40 ground water basins and subbasins or subareas.

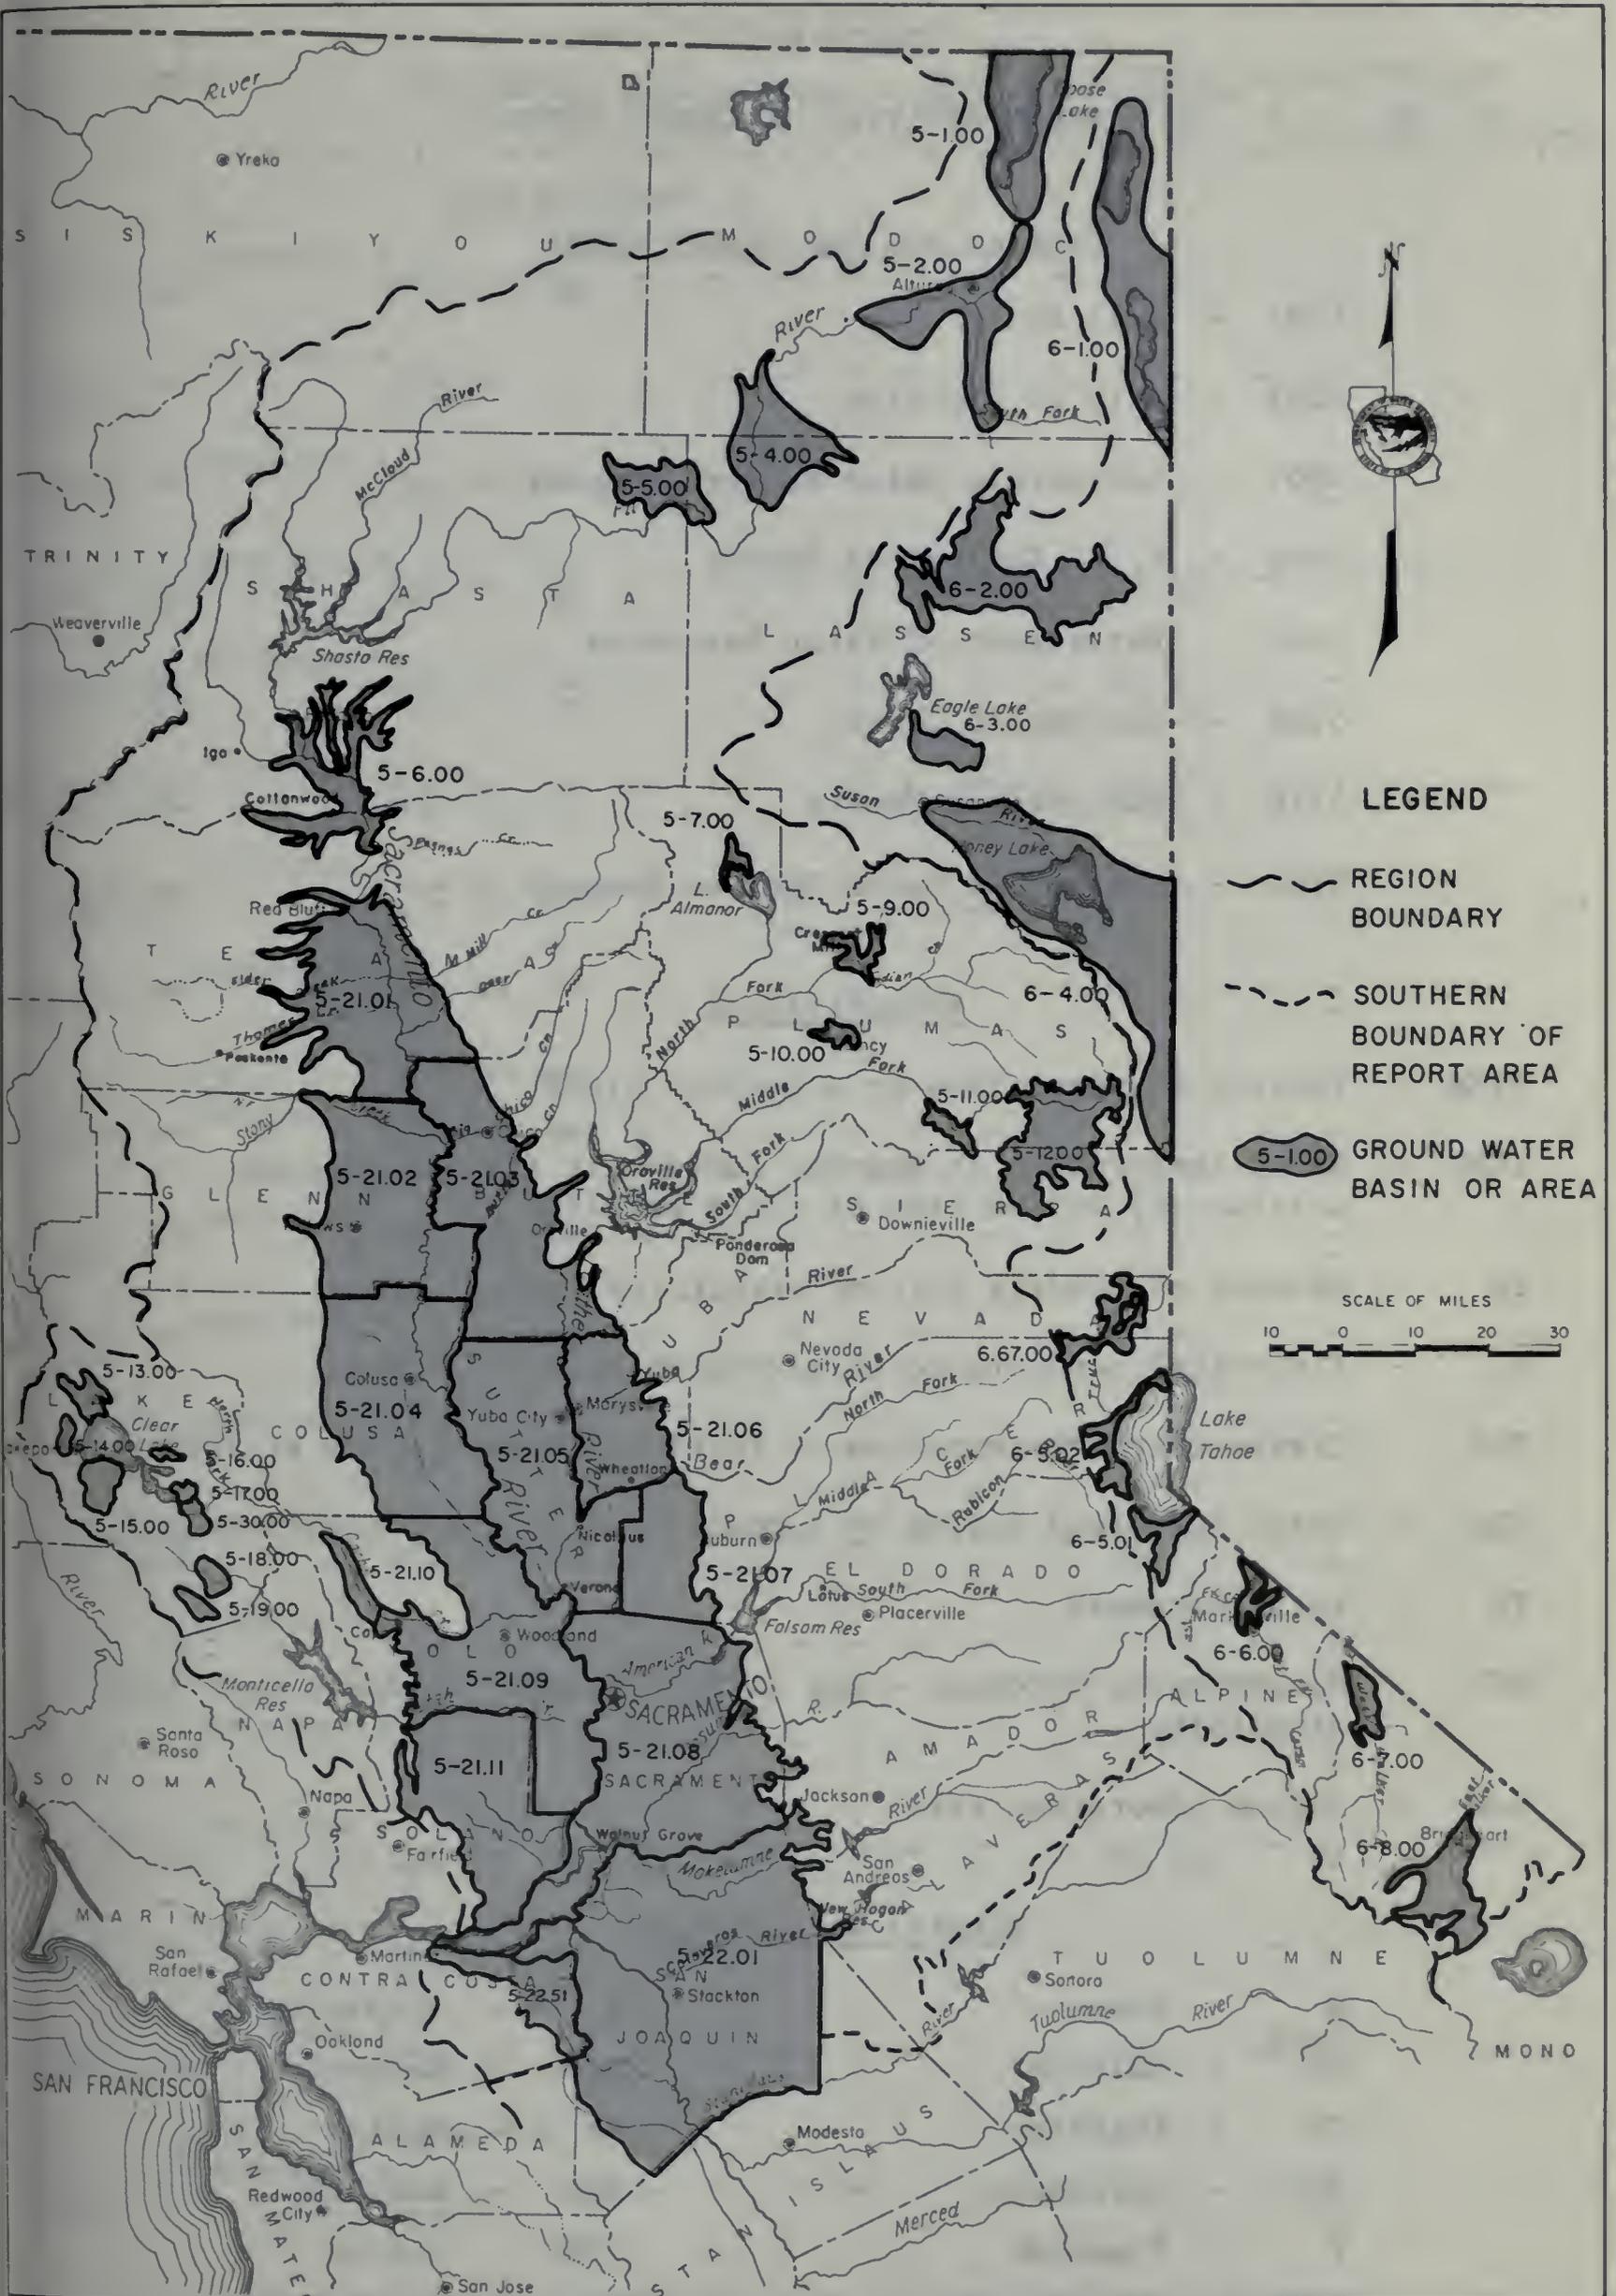

At the time of field sampling, pH and temperature measurements are normally made. Comments on current conditions are noted in field books which are available in the files of the Department of Water Resources.

Laboratory analyses of ground waters were performed in accordance with "Standard Methods for the Examination of Water and Wastewater", 13th Edition.

The Region and Basin and State Well Numbering Systems are described in Appendix C, "Ground Water Measurements", on page 239.

TABLE E-1

MINERAL ANALYSES OF GROUND WATER

Sampler and Lab Agency Codes

- 0001 - Well Owner
- 4203 - City of Stockton
- 4701 - California Water Service Company
- 5000 - U. S. Geological Survey
- 5050 - Department of Water Resources
- 5108 - Sacramento County
- 5110 - San Joaquin County
- 5701 - California Water Service Company

Abbreviations

- TIME - Pacific Standard Time on a 24-hour clock
- TEMP - Water temperature in degrees Fahrenheit (F) and degrees Celsius (C) at the time of field sampling
- PH - Measure of acidity (<7) or alkalinity (>7) of water
- EC - Electrical conductance in micromhos at 25° Celsius
- TDS - Gravimetric determination of total dissolved solids at 180° C
- SUM - Total dissolved solids by summation of analyzed constituents
- TH - Total hardness
- NCH - Noncarbonate hardness - any excess of total hardness over total alkalinity
- SAR - Sodium adsorption ratio

Mineral Constituents

Appendix F

WASTE WATER DATA

Appendix F, "Waste Water Data", which appeared in certain volumes of Bulletin No. 130 series, has been discontinued. For information regarding waste water, the reader is referred to the recently reactivated Bulletin No. 68 series: "Inventory of Waste Water Production and Waste Water Reclamation Practices in California".

Please note the data presented in Bulletin No. 68 are on a calendar year basis rather than a water year basis as is the case in Bulletin No. 130.
